Contents

- From Boot to Shutdown – Kernel Design, Security, Virtualization, and Debugging in Windows 10, 11, and Server 1**
- Introduction 2**
- Chapter 1: The Windows Boot Process – From Power-On to Desktop . . 3**
 - UEFI Firmware and the Handoff to Bootmgr 3
 - Boot Configuration Data (BCD) and Dual-Boot Architecture 3
 - Kernel Loading: winload.efi, Registry Hives, and Driver Initialization . 3
 - Session Manager Subsystem (smss.exe) and the First User-Mode Process 3
 - Winlogon, Services Control Manager, and Desktop Startup 3
 - Common Boot Failures and Recovery Mechanisms 4
- Chapter 2: The Windows Kernel Architecture – Kernel, Executive, and HAL 5**
 - Historical Context: OS/2, NT 1.0, and the Hybrid Microkernel Design 5
 - The Kernel Proper (ntoskrnl.exe): Threads, Synchronization, IPC, Interrupts 5
 - The Executive Subsystems: Object Manager, I/O Manager, Security Reference Monitor, Memory Manager, Process/Thread Manager, Cache Manager, Configuration Manager, Power Manager 5
 - Hardware Abstraction Layer (HAL): ACPI, Multiprocessor Support, and Abstracted Hardware Interfaces 5
 - Kernel Mode vs. User Mode: Privilege Levels, Ring 0/Ring 3, and the Transition Boundary 6
- Chapter 3: System Calls, Interrupts, and Exception Handling 7**
 - The System Call Interface: Nt* API Functions and the syscall Instruction 7
 - System Call Dispatch: KiSystemService, Fast Calls, and Argument Copying 7

Hardware Interrupt Processing: IDT, ISR/DPC Model, and Interrupt DPCs	7
Software Exceptions: Structured Exception Handling (SEH), Vectorized EH, and Exception Propagation	7
Debug Exceptions and the Kernel Debugger Interface	7
Comparison with Linux syscalls and interrupt handling	8
Chapter 4: Process and Thread Management	9
EPROCESS and ETHREAD Internal Structures	9
Process Creation: NtCreateProcess, PEB/TEB, and DLL Loading	9
Thread Creation and the Thread Environment Block (TEB)	9
Context Switching: KTHREAD, Save/Restore, and Stack Management	9
Job Objects and Process Groups	9
Comparison with Linux task_struct, fork/exec Model	10
Chapter 5: The Windows Scheduler – Preemption, Priority, and Quantum Management	11
Priority Levels and Priority Classes (Idle, Below Normal, Normal, Above Normal, High, Real-Time)	11
Time Quantum Allocation and Dynamic Priority Boosting	11
Multiprocessor Scheduling: Processor Affinity, NUMA Awareness, and the Ready Queue	11
I/O Completion Ports and Asynchronous I/O Scheduling	11
Real-Time Threads and Starvation Prevention	11
Comparison with Linux CFS Scheduler	12
Chapter 6: Virtual Memory Management – Address Spaces, Paging, and Physical Memory	13
Virtual Address Space Layout: User Mode vs. Kernel Mode Split	13
Page Tables: CR3, PML4/PDP/Directory/Page Table Hierarchy, and Hardware Support	13
Page Fault Handling: Demand Paging, Copy-on-Write, and Hard/Soft Faults	13
Working Set Management: Eviction, Trimming, and the Standby List .	13
Physical Memory Manager: PFN Database, Memory Partitions, and NUMA Nodes	13
Shared Sections, Mapped Files, and Section Objects	14
Chapter 7: Synchronization Primitives and Interprocess Communication	15

Kernel Synchronization: Mutexes, Semaphores, Events, and Critical Sections	15
Wait Mechanisms: KeWaitForSingleObject, Alertable Waits, and Timeout Handling	15
Interlocked Operations and Atomic Instructions (CMPXCHG, LOCK prefix)	15
Interprocess Communication: Mailslots, Named Pipes, LPC/ALPC, Shared Memory	15
Reader/Writer Locks, Slim Reader/Writer (SRW), and Spinlocks	15
Deadlock Detection, Debugging Synchronization Issues	16
Chapter 8: The I/O Manager and Driver Architecture	17
I/O Request Packets (IRP): Structure, Stack Locations, and Completion Routines	17
The Driver Object and Device Object Model	17
Dispatch Routines: Major Function Codes and IOCTL Handling	17
Filter Drivers: Upper/Lower Filters and Stream Inspectors	17
Plug and Play Manager: Device Enumeration, Power Management, and Resource Assignment	17
Windows Driver Kit (WDK): KMDF, UMDF, and Modern Driver Development	18
Chapter 9: Storage Stack, File Systems, and NTFS Internals	19
The Storage Stack: Classpnp, Disk.sys, Storport, and SCSI/Storage Miniport Drivers	19
Filter Manager and Volume Snapshots (VSS)	19
NTFS File System Architecture: MFT, B-Trees, Resident vs. Non-Resident Attributes	19
NTFS Data Structures: Boot Sector, Master File Table, Attribute Lists, Security Descriptors	19
ReFS, FAT32, exFAT, and the File System Filter Framework	19
Storage Spaces, Tiered Storage, and DirectStorage	20
Chapter 10: Networking Stack – From TCP/IP to Winsock	21
The TCP/IP Protocol Stack: Tcpip.sys, NDIS, and Protocol Drivers . .	21
Network Driver Interface Specification (NDIS): Miniport Drivers and Filter Drivers	21
Winsock 2 API: Socket Implementation, Overlapped I/O, and IOCP Integration	21

TCP Connection State Machine and Performance Tuning	21
Windows Filtering Platform (WFP) and Firewall Architecture	21
SDN, Hyper-V Virtual Switch, and Container Networking	22
Chapter 11: Security Architecture – Tokens, Privileges, Authentication, and Mitigations	23
Access Tokens: Structure, Privileges, Mandatory Levels, and Impersonation	23
Security Reference Monitor (SRM): ACL Evaluation, Object Security Descriptors, and Access Checks	23
Local Security Authority (LSASS): Authentication Packages, Kerberos, NTLM, and Credential Management	23
Integrity Levels and Mandatory Integrity Control (MIC)	23
Modern Exploit Mitigations: DEP, ASLR, CFG, Stack Cookies, and Guard Pages	23
Kernel Exploit Mitigations: PatchGuard, KASLR, and Pool Vulnerability Protection	24
Chapter 12: Virtualization – Hyper-V, Containers, and WSL	25
Hyper-V Architecture: Root Partition, Child Partitions, Virtual Processor Scheduling, and vGPU	25
Hardware Virtualization: Intel VT-x/AMD-V, Nested Paging/EPT, and Direct Execution	25
Windows Containers: Process Isolation, Hyper-V Isolation, and the Container Runtime	25
Windows Subsystem for Linux (WSL): WSL1 Translation Layer, WSL2 Lightweight VM, and Interop	25
Device Emulation, Paravirtualization, and SR-IOV	25
Chapter 13: Debugging, Performance Analysis, and Crash Dump Forensics	27
WinDbg Fundamentals: Breakpoints, Symbol Loading, Extension Commands (exts), and Debugger Scripts	27
Kernel Debugging: Serial/1394/USB/Network Debugging and Live Kernel Dump	27
Event Tracing for Windows (ETW): Providers, Sessions, Manifests, and Analysis with PerfView/Xperf	27
Crash Dump Analysis: Full/Memory/Hiberfil Dumps, Analyzing BSODs, and Common Bug Checks	27
Performance Counters, Sampling Profilers, and Memory Leak Detection	27

Practical Case Studies: Real Debugging Scenarios and Forensic Investigations	28
Chapter 14: Modern Security – VBS, HVCI, Credential Guard, and the Future	29
Virtualization-Based Security (VBS): Isolated Memory Regions and Secure Launch	29
Hypervisor-Protected Code Integrity (HVCI): Kernel Mode Signing Enforcement and DMA Protection	29
Credential Guard: Protected LSASS, Secure Boot Chain, and Identity Protection	29
Windows Defender Application Control (WDAC) and Attack Surface Reduction Rules	29
Secure Boot, TPM Integration, and Measured Boot	29
Future Directions: Confined Virtualization, Pluton SoC, and Zero Trust Architecture	30
Conclusion	31
References	32

From Boot to Shutdown – Kernel Design, Security, Virtualization, and Debugging in Windows 10, 11, and Server

About this book: Modern Windows is the most widely deployed desktop operating system in the world, yet its internals remain opaque to all but a small community of kernel developers, security researchers, and systems programmers. This book bridges that gap. It provides a comprehensive, technically rigorous treatment of the Windows NT kernel architecture from power-on through shutdown, covering the boot process, kernel initialization, memory management, process and thread scheduling, I/O subsystem, file systems, security architecture, virtualization technologies, debugging tools, and modern exploit mitigations. Every chapter includes annotated code snippets, data structure layouts, WinDbg debugging sessions, practical experiments, and comparisons with Linux where illuminating. This book is intended as a graduate-level textbook and professional reference for operating system developers, systems programmers, security researchers, reverse engineers, malware analysts, digital forensics practitioners, and advanced computer science students.

Introduction

This content is not available in the sample book. The book can be purchased on Leanpub at [https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat](https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating)

Chapter 1: The Windows Boot Process

— From Power-On to Desktop

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

UEFI Firmware and the Handoff to Bootmgr

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Boot Configuration Data (BCD) and Dual-Boot Architecture

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Kernel Loading: winload.efi, Registry Hives, and Driver Initialization

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Session Manager Subsystem (smss.exe) and the First User-Mode Process

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Winlogon, Services Control Manager, and Desktop Startup

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Common Boot Failures and Recovery Mechanisms

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Chapter 2: The Windows Kernel Architecture — Kernel, Executive, and HAL

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Historical Context: OS/2, NT 1.0, and the Hybrid Microkernel Design

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

The Kernel Proper (ntoskrnl.exe): Threads, Synchronization, IPC, Interrupts

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

The Executive Subsystems: Object Manager, I/O Manager, Security Reference Monitor, Memory Manager, Process/Thread Manager, Cache Manager, Configuration Manager, Power Manager

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Hardware Abstraction Layer (HAL): ACPI, Multiprocessor Support, and Abstracted Hardware Interfaces

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

Kernel Mode vs. User Mode: Privilege Levels, Ring 0/Ring 3, and the Transition Boundary

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

Chapter 3: System Calls, Interrupts, and Exception Handling

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

The System Call Interface: Nt* API Functions and the syscall Instruction

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

System Call Dispatch: KiSystemService, Fast Calls, and Argument Copying

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

Hardware Interrupt Processing: IDT, ISR/DPC Model, and Interrupt DPCs

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

Software Exceptions: Structured Exception Handling (SEH), Vectorized EH, and Exception Propagation

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

Debug Exceptions and the Kernel Debugger Interface

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Comparison with Linux syscalls and interrupt handling

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Chapter 4: Process and Thread Management

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

EPROCESS and ETHREAD Internal Structures

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Process Creation: NtCreateProcess, PEB/TEB, and DLL Loading

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Thread Creation and the Thread Environment Block (TEB)

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Context Switching: KTHREAD, Save/Restore, and Stack Management

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Job Objects and Process Groups

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Comparison with Linux task_struct, fork/exec Model

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Chapter 5: The Windows Scheduler – Preemption, Priority, and Quantum Management

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Priority Levels and Priority Classes (Idle, Below Normal, Normal, Above Normal, High, Real-Time)

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Time Quantum Allocation and Dynamic Priority Boosting

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Multiprocessor Scheduling: Processor Affinity, NUMA Awareness, and the Ready Queue

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

I/O Completion Ports and Asynchronous I/O Scheduling

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Real-Time Threads and Starvation Prevention

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Comparison with Linux CFS Scheduler

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Chapter 6: Virtual Memory Management — Address Spaces, Paging, and Physical Memory

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Virtual Address Space Layout: User Mode vs. Kernel Mode Split

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Page Tables: CR3, PML4/PDP/Directory/Page Table Hierarchy, and Hardware Support

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Page Fault Handling: Demand Paging, Copy-on-Write, and Hard/Soft Faults

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Working Set Management: Eviction, Trimming, and the Standby List

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Physical Memory Manager: PFN Database, Memory Partitions, and NUMA Nodes

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Shared Sections, Mapped Files, and Section Objects

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Chapter 7: Synchronization Primitives and Interprocess Communication

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Kernel Synchronization: Mutexes, Semaphores, Events, and Critical Sections

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Wait Mechanisms: KeWaitForSingleObject, Alertable Waits, and Timeout Handling

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Interlocked Operations and Atomic Instructions (CMPXCHG, LOCK prefix)

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Interprocess Communication: Mailslots, Named Pipes, LPC/ALPC, Shared Memory

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Reader/Writer Locks, Slim Reader/Writer (SRW), and Spinlocks

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Deadlock Detection, Debugging Synchronization Issues

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Chapter 8: The I/O Manager and Driver Architecture

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

I/O Request Packets (IRP): Structure, Stack Locations, and Completion Routines

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

The Driver Object and Device Object Model

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Dispatch Routines: Major Function Codes and IOCTL Handling

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Filter Drivers: Upper/Lower Filters and Stream Inspectors

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-system>

Plug and Play Manager: Device Enumeration, Power Management, and Resource Assignment

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

Windows Driver Kit (WDK): KMDF, UMDF, and Modern Driver Development

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

Chapter 9: Storage Stack, File Systems, and NTFS Internals

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

The Storage Stack: Classpnp, Disk.sys, Storport, and SCSI/Storage Miniport Drivers

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

Filter Manager and Volume Snapshots (VSS)

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

NTFS File System Architecture: MFT, B-Trees, Resident vs. Non-Resident Attributes

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

NTFS Data Structures: Boot Sector, Master File Table, Attribute Lists, Security Descriptors

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

ReFS, FAT32, exFAT, and the File System Filter Framework

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Storage Spaces, Tiered Storage, and DirectStorage

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Chapter 10: Networking Stack – From TCP/IP to Winsock

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

The TCP/IP Protocol Stack: Tcpip.sys, NDIS, and Protocol Drivers

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

Network Driver Interface Specification (NDIS): Miniport Drivers and Filter Drivers

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

Winsock 2 API: Socket Implementation, Overlapped I/O, and IOCP Integration

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

TCP Connection State Machine and Performance Tuning

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

Windows Filtering Platform (WFP) and Firewall Architecture

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

SDN, Hyper-V Virtual Switch, and Container Networking

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

Chapter 11: Security Architecture — Tokens, Privileges, Authentication, and Mitigations

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

Access Tokens: Structure, Privileges, Mandatory Levels, and Impersonation

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

Security Reference Monitor (SRM): ACL Evaluation, Object Security Descriptors, and Access Checks

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

Local Security Authority (LSASS): Authentication Packages, Kerberos, NTLM, and Credential Management

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

Integrity Levels and Mandatory Integrity Control (MIC)

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat>

Modern Exploit Mitigations: DEP, ASLR, CFG, Stack Cookies, and Guard Pages

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Kernel Exploit Mitigations: PatchGuard, KASLR, and Pool Vulnerability Protection

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Chapter 12: Virtualization — Hyper-V, Containers, and WSL

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

Hyper-V Architecture: Root Partition, Child Partitions, Virtual Processor Scheduling, and vGPU

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

Hardware Virtualization: Intel VT-x/AMD-V, Nested Paging/EPT, and Direct Execution

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

Windows Containers: Process Isolation, Hyper-V Isolation, and the Container Runtime

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

Windows Subsystem for Linux (WSL): WSL1 Translation Layer, WSL2 Lightweight VM, and Interop

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

Device Emulation, Paravirtualization, and SR-IOV

This content is not available in the sample book. The book can be purchased on Leanpub at [https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat](https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating)

Chapter 13: Debugging, Performance Analysis, and Crash Dump Forensics

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

WinDbg Fundamentals: Breakpoints, Symbol Loading, Extension Commands (exts), and Debugger Scripts

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Kernel Debugging: Serial/1394/USB/Network Debugging and Live Kernel Dump

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Event Tracing for Windows (ETW): Providers, Sessions, Manifests, and Analysis with PerfView/Xperf

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Crash Dump Analysis: Full/Memory/Hiberfil Dumps, Analyzing BSODs, and Common Bug Checks

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Performance Counters, Sampling Profilers, and Memory Leak Detection

This content is not available in the sample book. The book can be purchased on Leanpub at [https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat](https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating)

Practical Case Studies: Real Debugging Scenarios and Forensic Investigations

This content is not available in the sample book. The book can be purchased on Leanpub at [https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperat](https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating)

Chapter 14: Modern Security – VBS, HVCI, Credential Guard, and the Future

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Virtualization-Based Security (VBS): Isolated Memory Regions and Secure Launch

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Hypervisor-Protected Code Integrity (HVCI): Kernel Mode Signing Enforcement and DMA Protection

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Credential Guard: Protected LSASS, Secure Boot Chain, and Identity Protection

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Windows Defender Application Control (WDAC) and Attack Surface Reduction Rules

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating-systems>

Secure Boot, TPM Integration, and Measured Boot

This content is not available in the sample book. The book can be purchased on Leanpub at <https://leanpub.com/windowsinternalsarchitectureofmodernmicrosoftoperating>

Future Directions: Confined Virtualization, Pluton SoC, and Zero Trust Architecture
