Prologue

WordPress is a very popular CMS in the world of websites. In its previous version 3.4., WordPress introduced a new way of *designing* and configuring a theme without the need of developing and using Settings API. This new way provided us with a real example so we can see how the changes will affect are website and if we dont like it or it breaks up our website we can just easily click on **Cancel**.

This new way of customizing our themes is called **WordPress Customizer**.
