Notes:

- Run/Walk can be any combination of running and walking. The most important thing is *completing the mileage*.
- Active Recovery can be anything non-impact and not taxing on the legs
- Keep your runs on flats...and preferably softer terrain (trails, mulch, grass, etc.). It's easier on your legs.
- Wednesday runs that say "faster" should be done at a slightly greater intensity than the other runs. You shouldn't feel like you're dying – you should just be slightly out of breath as you're doing the miles
