1. Be sure that all of the Plots are turned off.

Go to: [2nd] [STAT PLOT]. Select "4: PlotsOff". Then press [ENTER]. This will turn off any plots that were on.

2. To clear functions, select them and press [CLEAR].

3. Enter functions in Y1. You can enter numerous functions by using the down arrow. Use the following hints for entering functions.
   - Use [x,t,theta,n] to type the variable "x".
   - Use the above and then the x squared button to type "x squared".
   - Use the caret key for variables with higher powers than "2".
   - Use the (-) at the bottom of the keyboard for a negative sign.
4. Disable a function by selecting the "=" sign and press [ENTER].

Note: To enable a function, select the "=" sign and press [ENTER].

5. To change the "look" of the function, select the symbol in front of the Y=. Then press [Enter] to go through the list of options.

Note: The second function will be bold when drawn.
