

Choose 2 labs to do. Write down or take a video of your observations.

I love and miss you all. Especially on lab day! ♡

A.) Stand back to back with someone and experiment with the different levels of loud and softness they can hear. (You can whisper, talk, clap, sing, etc.) Gradually increase the distance between you and record your results. ((c))

B.) Does light make sound? Experiment with different light sources to see if any of them make noises. (example: a light switch makes a clicking sound sometimes. :)💡

C.) Experiment with echoes. Does the pitch of your voice or the noise help it travel?

D.) Fill up some glasses or cups with different amounts of water. Record which amounts had different pitches. You must describe the amount of water, so I would measure them all out to make it easier.

Think rock music versus classical...

E.) Describe your experiences with how sound makes you feel.
