

POSITIVE OR PROBABLE CASE OF STUDENTS/STAFF IDENTIFIED

Isolate/Quarantine Probable Employee/Student

Immediately separate employee or student until they can leave the building or be picked up. Staff should follow internal infection prevention policies regarding the use of PPE when interacting with these individuals. Any need for testing will be determined by the individual's healthcare provider.

Address and Isolate Employees/Students Working Near an Infected Coworker/Classmate

2. Ask infected employees/students to identify all individuals who were in close proximity (within six feet of an adult or less than 3 feet between students if both students were properly masked) for a prolonged period of time (15 minutes or more collectively) with them during the 48-hour period before the onset of symptoms. Send home all employees/students who worked closely with the infected person as outlined herein.

- **Individuals that are fully vaccinated and asymptomatic will not be required to quarantine.**
- **Individuals who can provide documentation of recently recovering from COVID 19 will not be required to quarantine as a close contact as long as they are asymptomatic for 90 days following recovery.**
- **Individuals who were a close contact and both parties were appropriately wearing masks will not be required to quarantine.**
- **Close contacts will be required to quarantine for 10 days from exposure to a positive case.**
- **Close contacts who receive a negative test result 3 days following exposure will no longer have to quarantine and may return to the school setting.**

While quarantined, those employees/students should self-monitor for symptoms, avoid contact with high-risk individuals, and seek medical attention if symptoms develop.
