

Vendor Questions for Internal Connections RFP

Questions 1: I'm looking for clarification on the below for our bid response. Is the Aruba IAP315 what you all are looking for specifically? How many airwave licenses? How many support licenses? Will any racks or patch panels be needed?

Answer 1: We currently have the Aruba IAP215 in 19 of our schools. These units were purchased in 2016 and were the "latest and greatest" at that time. As stated in the RFP, vendors can submit multiple proposals outlining different options for consideration. If both models are available and both meet the specs as outlined in the RFP, we will consider both solutions if submitted as well as any other functionally equivalent submissions. We would like an airwave license and support for every AP purchased. If these are erate ineligible items, they should be priced separately. We do not need racks or patch panels.
