

# The Four Layers of Earth

## Vocabulary

**\*Quiz will be Friday (9/6/19)**

**\*may be rescheduled for 9/9/19\***

| Word          | Definition                                                                                                                |
|---------------|---------------------------------------------------------------------------------------------------------------------------|
| 1. Earth      | A planet that is known to hold life. It's made up of 4 layers.                                                            |
| 2. Crust      | The outermost layer of the earth. The 1 <sup>st</sup> layer (skin)                                                        |
| 3. Mantle     | Largest layer of the Earth and is made of metal and rocks. It's where lava in volcanoes comes from! 2 <sup>nd</sup> Layer |
| 4. Outer core | Layer made of liquid metals that spin around the inner core. 3 <sup>rd</sup> Layer                                        |
| 5. Inner Core | Layer made of solid iron & nickel; hotter than the surface of the sun. 4 <sup>th</sup> Layer                              |
