I would recommend required Covid-19 vaccination as a science trusted and verified method of limiting the spread of Covid-19 and as a form a protection to lessen the effects of the virus.

Additionally, I would recommend the verification of the vaccination status of the currently required vaccinations that we must take to attend school. I personally know a few students who are not up to date of their vaccinations that continue to attend.

*

None, looks great and safe for our kids, thank you for setting up the plans for safe guidelines for our kids and the great teachers!

No comments or questions

None.

How the sped classes are gonna work on 4 day a week

n/a

There was no soap in pre-k bathrooms as a matter of habit—not just an isolated incident. Hand washing is hard to implement if the soap dispensers do not work or are empty (because the “pre-k kids just make a mess”).

When questioning my chid about washing there hands and teachers and or custodial cleaning and taking care of the restrooms I was told that they very seldom had soap to wash there hands and that the paper products where always out and it was messy. The cafeteria was always the worst and when we attended the thanksgiving dinner it was evident of that. When the kids are asked to wash there hands but they have no soap to do so or dry there hands than that’s not good.

Good

Requiring the Covid-19 vaccine would prevent the spread and limit the effects of the virus on the student population.

.

Na

Our district does a great job

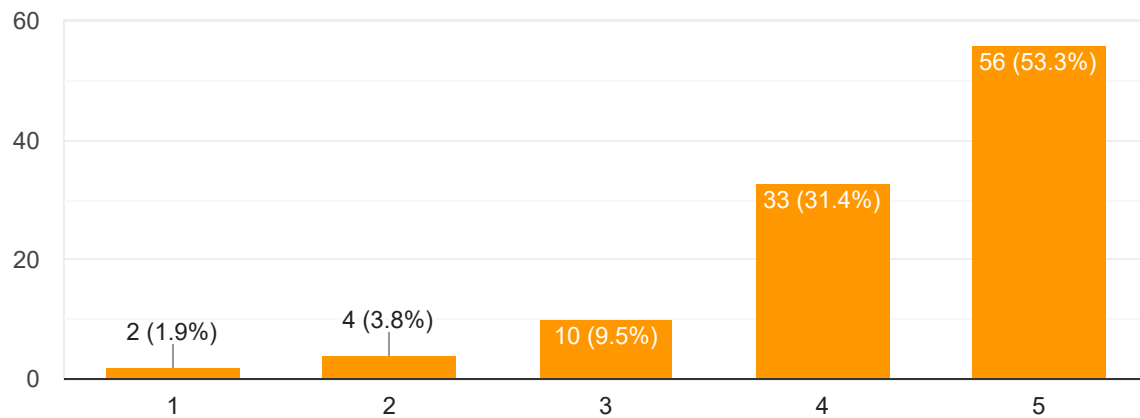

I am good with the plan.

I don't not have any questions.

Please rate how DeKalb ISD has implemented protocols such as hand washing, use of hand sanitizer, social distancing, and cleaning practices related to Covid-19 protocols.
