

RENWICK
made

Emma Orth

Andale High School 2011

Emma received her bachelor's degree in Chemical Engineering from Oklahoma State University and works as a Contact Engineer for ExxonMobil Refining and Supply Company in the Houston area.

What do you enjoy the most about your profession? Using my math and science background in a manufacturing environment where new challenges come up everyday. I also appreciate the opportunity to work with people from all over the country at a plant that is bigger than my hometown!

Was there a teacher who helped direct your path when you were a Renwick student? Shelley Ballard (Strong) helped me learn to love chemistry which led me to my college

major and current career. If I hadn't experienced her class, I wouldn't be where I am today. I would also like to acknowledge my many coaches who reinforced the importance of teamwork — something I use daily.

What kind of a difference did being a Renwick student make for you? It gave me a strong educational foundation that allowed me to go after the college degree I wanted. It also gave me access to extracurricular activities that expanded my skills outside of the classroom. Most importantly, the supportive faculty and local communities provided a one-of-a-kind environment to learn and grow. (Thanks, Mom and Dad, for choosing Renwick!)
