

Scabies Notice

Scabies has been reported in your child's classroom.

Scabies is a skin eruption accompanied by INTENSE itching caused by a mite that burrows under the skin. It is spread by direct contact with the infected person, clothing, bedding or personal belongings. It is communicable until all mites and eggs are destroyed by treatment. It will NOT go away on its own.

The treatment is a cream/lotion that must be prescribed by a doctor. Children should be excluded until receiving medical treatment.
