INSTALLATIONS MADE EASIER

The new E-box allows you to use your wire supply, allowing you to choose any length you need.

Simply lay the wires into the contacts and snap closed the cover to secure wires.

Install mounting plate to the stud of your choice. Clip the E-box plug to the mounting plate tab and wait for drywall completion.

After drywall is complete, plug the E-box into the back of the new ElectraValve® and attach the low volt wires.

See instruction sheet for complete installation guidance.
