

New Product Release Announcement

ALT-126R

126 Watt Impedance Matching Volume Control

Russound is proud to announce the launch of its latest evolution of impedance matching volume controls, the ALT-126R.

Combining the reliability and performance of our volume controls with an easy-to-access impedance magnification selector, the ALT-126R saves installers time and money on the job site while providing years of trouble-free music enjoyment to their customers.

Product Information and FAQ

What is the ALT-126R?

The ALT-126R is an easy-to-install, wall-mounted volume control with all of the features that installers need to save them both time and money on the job site:

Easily adjustable, built-in impedance magnification with a front-mounted switch, saving you time whenever a system configuration needs to be changed like when you add more Russound speakers

Removable high-grade screw-down terminal connectors that accept up to 12AWG wire with easy to read labels that help prevent any wiring mistakes during the installation

All-in-one packaging that includes the two most common installation color knobs, inserts and wall plates so you never have to worry about not having the right color at the job site

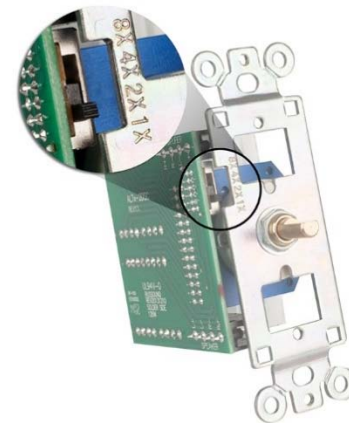

Powerful audio handling, rated for 126 watts peak and with a continuous rating of 42 watts RMS, to handle almost all of your volume control installation needs

Generous 48dB of attenuation to quiet even the loudest of your sources without degrading the sound quality

12 Pop-Free steps that allow a wide range of adjustment without interrupting anyone's listening enjoyment

Certified by ETL to meet applicable UL® and CSA® standards for a worry-free installation that will speed you through your building inspection process and get you moving on to your next installation

Guaranteed by Russound with a limited lifetime warranty for that peace of mind in knowing that you should never have to roll a truck to come back to the job site unless it is just to pick up your check at the end of the job

Is the ALT-126R replacing any product, or is it a new addition to the Russound line?

The ALT-126R replaces the ALTX-2D volume control. Both models are exact equivalents for the installation and wiring, but the ALTX-2D used more cumbersome jumper settings on the rear of the unit to make impedance adjustments. The new ALT-126R now has the easy-to-use front-mounted impedance switch.

What comes in the box?

Inside the ALT-126R box is the ETL-certified ALT-126R volume control, 2 screw-down terminal connectors, 2x Mounting Screws, instruction manual, and the following in both white and light almond colors: Knob, Decora® insert, matching Decora trim plate, and 2x Mounting Plate Screws.

What does the box look like?

The box is an elegant 4-color beauty box designed for either shelf-stacking or hanging in a peg hook display rack. It looks great on the shelf or hangs nicely in a display or inside an installer's truck, but most of all, it is easy to open on the job site and has been designed to take up as little space as possible.

Do I need a special tool to remove the knob?

No special tools are needed to remove the knob. The knob is attached with a long-lasting friction mount, designed to stay put for the typical user for a lifetime of enjoyment but easily removed by an installer.

What if I don't remember how to set the impedance switch properly?

The impedance switch settings are explained with a chart in the instruction manual, but if you haven't got the manual handy, www.russound.com is always available to get you quick access to the latest version.

What is the impedance switch setting when it leaves the factory?

All of our impedance switches should leave the factory at 1X (bypass), but we recommend that every installer take a look at the easy-to-see switch to confirm it is in the right position for each job before attaching the Decora insert.

How would you describe the ALT-126R in 100 words or less?

The ALT-126R is a premium wall-mounted volume control designed to allow easy, intuitive control of the volume of any audio system from single-room installations to whole-house distributed audio systems. Its high-quality autoformers and other components are designed to attenuate the audio, without adding extra artifacts or taking away from the listening experience in any way. The impedance matching design allows multiple speakers to be connected to the same amplifier without compromising the system design. The UL/CSA certification and limited lifetime warranty bring the peace of mind that demanding customers desire in their installed audio systems.
