Overview

Cable Connections

First connect the Weather Resistant Cap to an Ethernet patch cable, then connect cameras' ethernet adaptor. If not powering the camera with PoE+, also connect the power cable to an approved 12VDC Power Supply.

Weather Resistant Network Coupler

1. Loosen the nut from the Weather Resistant Network Coupler.
2. Run ethernet cable through coupler, then attach a RJ-45 connector.
3. Tighten the nut and coupler for a weather resistant seal.

Alarm Connections

1. Alarm Input

- There is one independent alarm input port (ALM-IN1), and one grounding port (ALM-GND).
- Alarm input (NO type): Connect DC5V~DC12V voltage between the alarm input port (ALM-IN1) and the grounding port (ALM-GND).
- Alarm input (NC type): Disconnect the voltage between the alarm input port (ALM-IN1) and the grounding port (ALM-GND)

2. Alarm Output

- Supports 1CH alarm output including OPEN, COM connections.
- Alarm output: One passive switch for a user to connect alarm devices: the alarm output state will be on / off according to your users' setting.

Installation

Before beginning, make sure that the wall or ceiling is strong enough to withstand the weight of the camera, and that the power is off.*Wall mounting instructions are below, followed by ceiling mounting and semi-flush mounting.

MicroSD Card

Installation

- Loosen the cover's 4 screws and remove it.
- Insert a microSD card as indicated (right) and re-install the cover.

Installation Using Wall Mount VT-TPT23HR-WM

*see page 10 for mount dimensions
(mount sold separately)

1. Fasten the adapter to the bracket.

2. Drill the screw holes in the wall according to the template. Then insert the plastic plugs into the holes.

3. Attach the bracket to the wall with four screws.

4. Hook the safety wire to the bracket. Then connect the cables. After that, attach the speed dome to the bracket with the screws.

1. Install the ceiling mount according to the following diagram:

2. Mount the adapter tube to the bracket and secure it with a screw.

3. Secure the pendent mounting bracket to the ceiling.

4. Connect cables, then hook the safety wire to the adapter stem.

5. Securely attach the camera to the adapter stem with screws.

Installation Using Semi-Flush Ceiling Mount VT-TPT20HR-FM

*see page 10 for mount dimensions (mount sold separately)

*The following illustrations are for demonstration purposes only, and depictions of the PTZ camera used as an example will differ from the actual camera.

1

Attach the drill template to the ceiling where you want to install the speed dome. Then cut a hole according to the drill template. Note that +2mm of the circle diameter is allowed.

2

① Attach adapter to the in-ceiling mounting bracket with the screws (M4) provided.

② Insert the screws (M5) provided into the side holes of the adapter, but do not tighten them as shown above.

3

Place the in-ceiling bracket on the speed dome according to the direction of the arrow as shown above. Then tighten the screws on the adapter to fix the bracket and the speed dome.

4

Route the cables Through the ceiling and connect the cables. Then push the speed dome into the mounting hole in the ceiling.

5

Tighten the lock screws with the screwdriver and the locks will automatically rotate outwards to secure the speed dome to the ceiling.

6

Install the trim ring.

LAN Configuration

The camera can be accessed on the local network either using the IP-Tool or directly in a web browser.

Accessing the Camera Using the IP-Tool

1. Make sure the camera and PC are connected to the LAN.
2. Locate the IP-Tool installer at www.vitekccv.com/Downloads/Software/Transcendent-IPTool_v2.0.2.zip, then install on the PC. Open the installed application.

3. Modify the IP address. The default IP address is 192.168.226.201. Click the information of the camera listed in the above table to show the network information on the right side. Modify the IP address and gateway of the camera and make sure its network address is in the same local network segment as the computer's. Please modify the IP address of your device according to the practical situation.

For example, the IP address of your computer is 192.168.13.4. So the IP address of the camera shall be changed to 192.168.13.X. After modification, please input the password of the administrator and click "Modify" button to modify the setting.

Mac Address: 1C:7C:45:13:0D:98

IP Address: 192.168.226.201

Subnet Mask: 255.255.255.0

Gateway: 192.168.226.1

Modify

** Default admin password: "123456".

4. Double-click the IP address and then the system will pop up the web browser to connect IP-CAM. Edge in IE mode / IE browser will download the Active X. control. After downloading, a login window will pop up as shown below:

Input the user name and password to log in.
Default user name: admin / Default password: 123456.

Directly Access Through a Web Browser

The default network settings are as shown below:

IP address: 192.168.226.201 HTTP: 80

Subnet Mask: 255.255.255.0 Data Port: 9008

Gateway: 192.168.226.1

You may use the above default settings when you log in the camera for the first time.

1. Manually set the IP address of the PC. The network segment should be the same as the default settings of IP-CAM. Open the network and share center. Click “Local Area Connection” to pop up the following window.

Select “Properties” and then select Internet protocol according to the actual situation (for example: IPV4). Next, click “Properties” button to set the network of the PC.

2. Open Edge in IE mode / IE browser and input the default address of IP-CAM and confirm. Edge in IE mode / IE browser will download Active X control.
3. After downloading Active X control, the login dialog box will pop up.
4. Input the default username and password and then enter to view.

WAN Configuration

Access the camera by the router or virtual server for example.

1. Make sure the camera is connected to the LAN; Then log into the camera via LAN and go to System Config→Network Config→Port menu to set up the port number.
2. Enter System Config→Network Config→IP Address menu to modify the IP address.

Port Server DDNS SNMP 802.1X RTSP UPn
