et al: "MOUTHPIECE AND METHODS OF USE OF SAME" Co-Inventor: U.S. Patent US08684919-2014.

The device, **TIO** ("Three In One" is a combination of a bite block, oral airway and an attached oxygen port, most helpful in cases when an oxygen mask cannot be used(upper endoscopies, TEEs, Bronchoscopies) when a bite block is required for probe protection and when the sedation required for the procedure might lead to airway obstruction.

The device is currently on the market.

N. **MENTORING**

Mentorship is a longitudinal, collaborative learning relationship to help the mentee or protégé succeed. Mentoring can be provided within many formats, including one-to-one, small groups, or large group workshops or lectures, which cover any topic directly related to the mentee's career development.

Please list trainees and faculty that you have formally supervised. Individuals listed in this section should be those supervised in a research, teaching or clinical setting. List only those on whose careers you have had a substantial impact. Do not indicate those for whom you have provided general career advice. This section may be annotated to provide more information.

If this is the candidate's first faculty appointment at WCMC, please list mentoring contributions at institutions where the candidate previously held a faculty position.

Current Mentees

Recognition of Exemplary Service during the COVID-19 Pandemic

Please complete if relevant or DELETE entirely.

Faculty across all missions are encouraged to provide below an optional narrative, not to exceed 1 page, of their performance of unusual and exemplary service during the COVID-19 pandemic. This may include such activities as increased clinical service or redeployment to areas outside of their basic expertise, transformation of laboratory activities in support of COVID-19-related research, development of new educational curricula to enable remote electives and on-line learning.

As a staff anesthesiologist at Northshore University Hospital (NSUH) I participated actively and extensively in intubating COVID-19 patients in the ICU and providing anesthesia for tracheostomies at bedside in the ICU, as part of the intubating and tracheostomy teams. Also, as the Director of EP anesthesia at NSHU I was participated in the team effort to establish protocols for anesthesia in remote locations such as Electrophysiology, Catheterization, Echocardiography and Interventional Radiology. We materialized those efforts into 3 peer reviewed articles, outlined on the peer-reviewed section.
