Last week at #CES2025, our CEO Mich Binsdorbauer was front and center in conversations at the intersection of the AI revolution and the future of energy. As we discussed with tech and media leaders, TAE's fusion power plants are poised to help meet growing U.S. energy needs with safe, reliable power.

We're already moving toward commercial fusion power:

- Site selection is underway for the first TAE fusion power plant.
- After the closing of our previously announced merger and obtaining required approvals, the combined, post-merger company anticipates beginning construction in 2025.
- The first plant is expected to deliver 50 MWe of power, with future plants expected to scale to up to 350-500 MWe.

Powered by TAE's advanced beam-driven approach, these plants will provide abundant, affordable electricity without the risks of meltdown or long-lived waste.

"This is fusion's moment," said Binsdorbauer. "Surging power demand and fusion's strong safety profile provide significant tailwinds for further deployment of our technology."

The future of energy is here. And it's fusion.
