

Front & Back Viewing.

Sometimes your environment calls for rear projection and sometimes, front projection. Sometimes, however, you want both. 360 is a fantastic screen material for rear-projection purposes but is also capable of producing a nearly identical image on the opposite side, regardless of projector location.

Ultra-Wide Viewing Angle.

360 utilizes an incredibly smooth diffusion layer within the viewing surface which allows the projected light to be perfectly distributed in all directions. This perfect distribution creates an incredible wide viewing cone enabling extreme off-axis viewing.

Two Screens for the Price of One.

Save your money! Our dual-sided viewing capability of 360 means with a single projector and 360 screen, you can do what took two projectors and two screens before. Hang a screen over your restaurant or bar and achieve 360 degrees of viewing with only a single source.

360 .85
