

The Arch platform

- web-based tool
- no hardware or no
- Software to buy or install.

You only need internet access and a browser to get to your information and maintain your records.

And, with our pay-as-you-go model, there's no up-front investment to worry about.

AED Management Compliance

Good Safety is Good Business!

WEB BASED

COST
EFFECTIVE

Arch enables AED owners to properly maintain, track, and service their AED units, helping to instill confidence in their ability to manage legal compliance and maintenance needs required by law.

Complete Compliance. Complete Confidence.

■ **Medical Direction**

Arch removes the mystery surrounding AED medical direction and oversight services by offering the resources and support of the country’s leading physicians. Arch adds confidence, assurance, and reliability – not just that AEDs are the right equipment to deploy in communities across the country, but that once deployed, maintaining legal compliance is a breeze.

■ **Readiness Checks & Equipment Expiration Reminders**

To help meet statutory mandates and AED manufacturer’s guidelines, all AEDs should be regularly monitored and documentation of 30-day readiness checks should be stored in a secure location, like Arch’s password-encrypted web-based platform. Arch allows users to choose their preferred medium of receiving reminders (email, text messages, phone calls, etc.), and the timing and escalation protocols used to receive readiness checks and equipment expiration reminders

■ **Customized Reporting**

Often times, large organizations must run important reports like AED unit locations, AED “status” summaries, or all trained users at one particular location. Want a report of all AED units added to your account since 1/1/10, located in Northern California, and beginning with serial number “1”? What about a list of all equipment such as batteries and electrode pads that will expire in next fiscal year?

■ **Smartphone Mobile App**

You no longer have to walk back and forth to your AED location and your desktop workstation just to report and record the finding of your AED inspections. In addition, you will no longer have to use antiquated techniques like maintenance tags and paper files. This is a web-based program that is just that, web-based.

■ **Automatic EMS Registration**

Each county and state in the United States sets their own standards, creates their own registration forms, has their own unique filing protocols, streamlining a national program, using the proper documentation, can be tough. Arch, however, alleviates all of these concerns by automatically filing new AED unit registration forms instantly – using the actual documentation required by a given jurisdiction – nationally.

■ **Integrated E-commerce**

What would happen if your AED had to be used, but your battery was “in the mail”? Arch solves these problems, using the AED-industry’s most advanced e-commerce shopping cart, tying your national equipment records from the Arch platform to our predictive, fully-integrated, e-commerce store. Arch allows each of our users to purchase the supplies they need, on time, before it’s too late.

Compliance.Preparedness.Management.

No matter what type of unit you own, where you are located, or the size of your AED program, you must abide by a litany of ordinances, rules, regulations, and laws. Arch helps ensure your compliance with all county, state, and federal regulations. We assign a Medical Director to oversee your program and facilitate in legal compliance. We make sure each location has the supervision and instruction needed to maintain all necessary documentation. Our records management system is a cost-effective addition to every Automated External Defibrillator (AED) we provide.
