

## CWPP Update Online Survey

The Carpinteria-Summerland Fire Protection District is initiating the process of updating our 2013 Community Wildfire Protection Plan (CWPP). As part of the CWPP update process, we've developed an online survey. The purpose of this survey is to understand the experiences, perceptions, needs, and concerns of local residents to past and future wildland fire threats. Information from this survey will assist the Fire District and other key Stakeholders in developing community-based activities, educational programs, services, policies and other action items that not only help mitigate wildland fire risks but are also locally relevant, inclusive and sustainable.

We need your involvement to develop a Community Wildfire Protection Plan that addresses the Fire District's unique characteristics and what is important to you. Please take the time to complete the following SURVEY to provide your input and perspective on how our community can become more resilient to wildfire.
