Santa Monica police respond to beach shooting and motel standoff over the weekend

MATTHEW HALL  
Daily Press Editor

While Santa Monica reported little to no serious incidents over the busy July 4 holiday, a pair of gun crimes rattled residents last weekend just as the area braces for a potential influx of visitors looking to escape inland heat.

BEACH SHOOTING

In the first incident, two young women were shot on the 2700 block of the beach at about 9:22 p.m. on Friday night.

According to SMPD, officers were on their way to the area for reports of a large party on the beach and in the adjacent lot. As officers approached, they heard multiple gunshots.

STANDOFF: The suspect surrendered after a multi-hour standoff with police on Sunday.

SANTA MONICA'S WEATHER

Santa Monica's weather has remained slightly cooler than normal for much of the year and while temperatures will increase a little in the coming week, local conditions are going to be vastly more comfortable than neighboring communities that are bracing for a full-fledged summer heatwave.

There may be 30 - 40 degree differences this week between the beach and inland temperatures.

One-wheeled fundraiser

Arabella Joaquin

Lukas Oakley doesn't know how he's getting home after visiting Santa Monica, but he'll be happy to at least have a seat for most of the journey.

Oakley, an Air Force veteran, took his electric unicycle for a 3,000 mile journey across the country to bring awareness to the Wounded Warrior Project and ended his trip at the Santa Monica beach this week.

While Oakley himself was
How extreme heat takes a toll on the mind and body, according to experts

SUSAN MONTOYA BRYAN
Associated Press

The Southwestern U.S. is bracing for another week of blistering temperatures, with forecasters on Monday extending an excessive heat warning through the weekend for Arizona's most populated area, and alerting residents in parts of Nevada and New Mexico to stay indoors.

The metro Phoenix area is on track to tie or break a record set in the summer of 1974 for the most consecutive days with the high temperature at or above 110 degrees Fahrenheit (43 Celsius). Even the morning low temperatures are tying historic records, with the airport logging 91 F (32.8 C) to match the warmest low set in 2020.

Along the U.S.-Mexico border, federal agents reported that extreme temperatures over the weekend contributed to 45 people being rescued and another 10 dying.

With so many consecutive days of excessive heat, forecasters, physicians and local health officials throughout the Southwest are recommending that people limit their outdoor exposure and know the warning signs of heat illness.

KNOWING THE SIGNS
From heavy sweating and dizziness to muscle spasms and even vomiting, experts say heat exhaustion and heat stroke are likely to become more common. In coming decades, the U.S. is expected to experience higher temperatures and more intense heat waves.

Heat stroke is the most serious heat-related illness and happens when the body loses its ability to sweat.

The skin gets hot and red, and the pulse quickens as the person's body temperature climbs to 103 F (39 C) or higher. Headaches set in, along with nausea, confusion and even fainting.

Jon Femling, an emergency medicine physician and scientist at the University of New Mexico, said the body tries to compensate by pumping blood to the skin as a way to cool off. And the more a person breathes, the more they lose fluids, becoming increasingly dehydrated.

“So one of the first things that happens is, your muscles start to feel tired as your body starts to shunt away,” he said. “And then you can start to have organ damage where your kidneys don’t work, your spleen, your liver. If things get really bad, then you start to not be perfusing your brain the same way.”

Experts say it’s important to recognize the signs of heat stroke in others, as people may not realize the danger they’re in because of an altered mental state that may involve confusion.

In the case of heat stroke, experts suggest calling 911 and trying to lower the person’s body temperature with cool, wet cloths or a cool bath.

With heat exhaustion, the body can become cold and clammy. Other signs include heavy sweating, nausea, muscle cramps, weakness and dizziness. Experts say the best thing to do is to move to a cool place, loosen clothing and sip some water.

Older people, children and those with health conditions can face greater risks when the temperatures are high.

In general, health officials say staying indoors, seeking air-conditioned buildings and drinking more water than usual can stave off heat-related illnesses. Caffeine and alcohol are no-nos. Eating smaller meals more often throughout the day can help.

LEARNING THE LIMITS
Researchers at Arizona State University are trying to better understand the effects of extreme heat on the body and what makes hot weather so deadly.

They’re using a special thermal mannequin called ANDI that is outfitted with nearly three dozen different surface areas that are individually controlled with temperature sensors and human-like pores that produce beads of sweat.

“A lot of research that I and my colleagues do is just really focused on understanding how people are responding to higher levels of extreme heat over longer periods of time and then what we can do about it,” said
From poverty to power, new California Speaker seeks Democratic caucus unity but offers few details

TRÂN NGUYỄN
Associated Press

When California Assembly Speaker Robert Rivas was a child growing up in California’s rural Central Coast, he watched his grandfather risk his job fighting in the farmworkers’ rights movement to bring a better life to his family and his fellow workers. A Mexican immigrant, his grandfather was the lead organizer for the United Farm Workers at the vineyard where he picked grapes. The union eventually won a labor agreement that provided farmworkers with better working conditions, higher wages and pensions: a victory that helped lift Rivas’ family out of poverty.

“The one thing he always shared with me is change doesn’t just happen. You have to make it happen,” Rivas said of his grandfather.

Rivas, 43, recently became California’s first speaker from a rural area in modern times, hailing from the city of Hollister where he lives with his wife and 7-year-old daughter. Rivas and his allies say his journey from an impoverished home to one of the most powerful positions in California politics will usher in a fresh set of perspectives that could bring people together on issues facing the nation’s most populous state.

After a relatively quiet four years in the Assembly focused on agricultural and farmworker issues, Rivas forced his way into the influential office last year despite much resistance from then-Speaker Anthony Rendon, who is still unhappy about how the power struggle played out.

Rivas is now one of three most powerful political figures in California, alongside the governor and Senate president pro tempore. The speaker installs committee chairs, controls what legislation gets voted on and negotiates the budget with the governor and Senate leader. He also wields power by assisting fellow Democrats with their campaigns.

On paper, Rivas and his predecessor hold equal prominence. But when he decided to run for the San Benito Board of Supervisors in 2010, he unseated an incumbent with Rick’s help.

Botelho, a Republican, pulled Rivas aside and suggested he focus more on working with his colleagues than fighting them.

“And he took it to heart. He really did,” Botelho said.

Rivas learned to find consensus with his colleagues to tackle the effects of the Great Recession while sticking to his progressive principles, Botelho said. When a controversial local zoning decision came up, Rivas refused to support it. Botelho caved and joined the majority even though he had concerns.

“That proved something to me right there that he’s tough enough to stay with his convictions, and I wish I was that good,” Botelho said.

Rivas also was the first to champion a successful, citizen-led anti-fracking effort in the county, despite a formidable opposition campaign by the oil industry.

Rivas hasn’t said how he plans to navigate the relationship with his brother, who is now an executive with the powerful American Beverage Association, as he assumes the speakership. A spokesperson with the speaker’s office said “his legislative record speaks for itself.”

PRIORITIES AS SPEAKER

Exactly how Rivas will bring those convictions and experience to the speakership remains to be seen. He has said little about his specific plans as the Assembly leader.

Rivas pledged “minimal disruptions” to the caucus but has made some leadership changes, elevating his political allies. Rivas also removed Democratic Assemblymember Joaquin Arambula from a budget subcommittee after Arambula attempted to challenge Rivas’ speakership in January.

Rivas wouldn’t say whether he would break from Rendon’s hands-off approach giving his committee chairs control over legislative priorities. But he planned to deploy the same strategies he used to win allies as he jockeyed for the speakership.

“The overwhelming majority of the caucus has moved on,” Assemblymember Jesse Gabriel, a Rivas ally, said of the in-party fighting.

Even some Republicans say they’re excited about Rivas, pointing to his time as chair of the Agricultural Committee when he conducted a statewide tour to learn about different rural communities.

Republican Assemblymember Heath Flora, who serves on the committee, said “we’re in good hands” if Rivas is as good a speaker as he was a chair.

Rivas said he expects to continue advocating for farmworkers and bridging the gap between urban and rural areas, and he may author some legislation in those areas. During his first term, Rivas successfully led a bill that helps streamline farmworker housing with the backing of civil rights icon Dolores Huerta.

“He seems to care about the community and ... he seems to be following through with his statements,” said Natalie Herendeen, executive director of the Center for Community Advocacy, which helps farmworkers organize.

The opportunities that helped pull his family out of poverty and helped him ascend to the speakership are dwindling in California, Rivas said, but he vows to bring them back.

“When I look back on the hard work and opportunities I’ve had, I want my daughter to enjoy those same opportunities, but I think many people are questioning whether that is possible in this state,” Rivas said. “That’s the important work we have to do.”
California student: I have college loans but don’t want my debt forgiven. Here’s why

EYTHANA MILLER

I have $7,248 in student loans but I’m not disappointed that the U.S. Supreme Court blocked President Biden’s attempt to forgive student debt.

I understand that student loan debt is a problem and that I’ll work to repay mine. But given the opportunity again, I’d gladly take it. Lifting a portion of debt off a select group of Americans will add to inflation and lead to the growth of already crushing tuition prices – even at UC Berkeley where the semesterly cost for a California resident is $9,595, much lower than the nonresident $25,108.

My stance probably isn’t popular among my classmates, but it might help to tell you a little about my family and myself.

My parents grew up Amish and, traditionally, kids begin working after 8th grade. I did the same. Instead of going to high school, I stocked shelves and managed inventory at my family’s small grocery shop nine miles outside of a former logging town called Libby, Montana.

I studied for my GED diploma, and at 17, moved on my own to Redding, the seat of Shasta County. I worked multiple jobs, determined to be self-sufficient.

I hadn’t grown up thinking about college. I didn’t know anyone who had gone. But one night during a restaurant shift, I overheard a coworker talking about his classes at Shasta College, the local two-year. He wasn’t paying tuition – in California, community college is all but free and I instantly bookmarked the fact for investigation. After many emails, swimming through bureaucratic layers of establishing residency and understanding requirements, I enrolled, and began making up for years of missed high school through algebra Zoom classes in the summer of 2020.

I hated being behind my peers, struggling through algebraic factoring and slopes after work on weekend nights, calling friends who were “normal” college freshmen and loved mathematics for help on 9th-grade problems.

After two years of full-time studying while nannying, freelance writing and tutoring, I applied to UC Berkeley and, to my surprise, started school there last fall. In a thousand small ways, I began discovering what had been out of my reach. I digested political theory, economic history and international relations while working to pay tuition and living expenses.

This spring, I took out a loan. My parents help when they can and I’m deeply appreciative, but generations without exposure to academics meant that education was relegated to a lower rung on the financial priority ladder.

President Biden’s proposed loan forgiveness plan would’ve cost between $300 billion and $980 billion, according to the Penn Wharton Budget Model. While many students would gladly have had their loans forgiven – and understandably so – they’re missing the rest of the picture.

As a professor told me last semester, “The history of U.S. public policy is essentially a series of unintended consequences.” Loan forgiveness gives universities the incentive and ability to raise tuition prices even higher, as students will be more comfortable taking out loans to cover these additional costs, with the potential of forgiveness looming.

College prices rose 31% from 2010-2020, and this plan would’ve worsened the cycle, feeding into the swelling inflation we love to complain about. The U.S. household debt crisis is a concern, but data shows that individuals who hold a college degree earn a much higher income on average, and therefore are more equipped to pay off debt and continue building wealth.

Those without a degree are more often stuck in paycheck-to-paycheck dependence, lacking the skills necessary to climb into a higher income bracket. The accessibility of community college as the spark to kickstart an educational journey should not be understated.

Offering two years for free across the country would do more to bring new students into higher education than forgiving debt for those who’ve already had the privilege of attending. I know firsthand the significance of the second chance that community colleges provide.
Crimes Watch is culled from reports provided by the Santa Monica Police Department. These are arrests only. All parties are innocent until proven guilty in a court of law.

**NOTICE OF PUBLIC HEARING WITH RESPECT TO THE ISSUANCE OF TAX-EXEMPT REVENUE OBLIGATIONS BY THE CALIFORNIA ENTERPRISE DEVELOPMENT AUTHORITY FOR THE PURPOSE OF FINANCING OR REFINANCING THE COST OF ACQUIRING, DEVELOPING, CONSTRUCTING, INSTALLING, EQUIPPING AND FURNISHING OF EDUCATIONAL FACILITIES FOR THE BENEFIT OF NEW ROADS SCHOOL AND/OR A RELATED ENTITY**

**NOTICE IS HEREBY GIVEN** that at 5:30 p.m., or as soon thereafter as the matter may be heard, on July 18, 2023, at the City Hall Council Chamber, 1685 Main Street, Santa Monica, California, the City Council of the City of Santa Monica (the “City Council”) will conduct a public hearing (the “Public Hearing”) at which the City Council will hear and consider information concerning the issuance, from time to time, pursuant to a plan of finance, of one or more series of tax-exempt revenue obligations by the California Enterprise Development Authority (the “Issuer”) in an aggregate principal amount not to exceed Twenty Five Million Dollars ($25,000,000) (the “Obligations”) for the benefit of New Roads School, a nonprofit public benefit corporation, duly organized and existing under the laws of the State of California (the “State”), and/or a related entity (the “Borrower”). The Issuer will loan the proceeds of the Obligations to the Borrower pursuant to one or more loan agreements collectively (the “Loan Agreements”). The proceeds of the Obligations loaned to the Borrower will be applied to (a) finance or refinance the cost of acquisition, construction, development, improvement, renovation, furnishing and equipping of the Borrower’s educational campus consisting of (i) an approximately 2.6 acre campus located at 3131 Olympic Boulevard, Santa Monica, California 90404 and bordered by Olympic Boulevard to the south, Franklin Street to the east and Berkeley Street to the west, including approximately 73,150 square feet of improvements including classrooms, a theater, science labs, offices, outdoor play and sports areas, parking, and related and ancillary facilities, and (ii) an approximately 9,700 square foot building located at 1836 Franklin Street, Santa Monica, California 90404 (collectively, the “Facilities”), and (b) pay certain costs of issuance in connection with such financing or refinancing. The Borrower is an organization described in Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (the “Code”), and will own and operate the Facilities in connection with its mission of providing an inspired college preparatory program for students in grades K-12 where an authentically diverse student population develops personal dedication to learning, a respect to independent thinking and an expanding curiosity about the world and its people. The Obligations will be paid entirely from repayments by the Borrower under the Loan Agreement.

Neither the faith and credit nor the taxing power of the City of Santa Monica (the “City”), the State, or any other political corporation, subdivision or agency of the State is pledged to the payment of the principal of, premium, if any, or interest on, the Obligations, nor shall the City, the State or any other political corporation, subdivision or agency of the State be liable or obligated to pay the principal of, premium, if any, or interest on, the Obligations.

Additional information concerning the above matter may be obtained from, and written comments should be addressed to, City Clerk, City of Santa Monica, 1685 Main Street, Room 102, Santa Monica, California 90401 or email to councilinfo@ city.santamonica. gov.

The meeting facility is wheelchair accessible. For disability-related accommodations, please contact (310) 458-8341 or (310) 458-8696 TTY at least 72 hours in advance. Every attempt will be made to provide the requested accommodation. All written materials are available in alternate format upon request. Santa Monica Big Blue Bus Lines number 2, 5, and 9 serve City Hall.

Convicted Murderer Who Ran $1.5 Million COVID Jobless Benefits Fraud from Behind Bars Sentenced to 7 Years in Federal Prison

A woman serving a life sentence in state prison for murder was sentenced today in federal court to 84 months in federal prison for leading a ring that fraudulently obtained more than $15 million in California unemployment insurance (UI) benefits – mostly pandemic-related relief – by using other people’s identities, some of which belonged to her fellow California prison inmates.

Natalie Le Demola, 38, who was incarcerated at the California Institution for Women in Corona at the time of the offense, was sentenced by United States District Judge John F. Walter, who also ordered her to pay $933,381 in restitution. Demola is serving a life sentence after being convicted in 2005 of the first-degree murder of her mother.

Judge Walter ordered Demola to serve her federal prison sentence consecutive to her state prison sentence. She will be eligible for parole from state prison in July 2026.

Demola pleaded guilty on March 7 to one count of conspiracy to commit bank fraud and wire fraud, three counts of bank fraud, and one count of aggravated identity theft.

From June 2020 until April 2021, Demola and other co-conspirators acquired the personal identifiable information (PII), such as the names, dates of birth, and Social Security numbers, of individuals – including identity theft victims – who were not eligible for UI benefits, including pandemic benefits, because they were employed, retired, or incarcerated.

Members of the conspiracy then used the information to make fraudulent online applications for UI benefits from the California Employment Development Department (EDD). Once the applications were approved, members of the conspiracy received EDD-funded debit cards that allowed them to withdraw money from ATMs across Southern California.

The total loss incurred by this conspiracy was $1,546,931.

“[Demola] led and organized a scheme in which she and her co-conspirators pocketed hundreds of thousands of dollars allocated for residents of California who were unemployed on account of the COVID-19 pandemic,” prosecutors argued in a sentencing memorandum. “[Demola] made a cost-benefit analysis and decided that the money and influence, including among fellow inmates, that she stood to gain was worth the additional penalties she faced if she were caught.”

Prosecutors secured a total of 13 guilty pleas in this case.

The investigation into this scheme was conducted by the Los Angeles El Camino Real Financial Crimes Task Force, a multi-agency task force led by Homeland Security Investigations that includes federal and state investigators who are focused on financial crimes in Southern California. The California Employment Development Department, the California Department of Corrections and Rehabilitation, the United States Department of Labor Office of Inspector General, the Inglewood Police Department, and the United States Marshals Service participated in this investigation.

Assistant United States Attorneys Nisha Chandran of the Cyber and Intellectual Property Crimes Section and David C. Lachman of the Terrorism and Export Crimes Section prosecuted this case.

Los Angeles

L.A. Man Gets More Than 6 Years in Prison for Illicitly Obtaining Nearly $9 Million in COVID Loans, Some of Which He Used for Las Vegas Gambling

A West Los Angeles man was sentenced today to 79 months in federal prison for fraudulently obtaining approximately $9 million in COVID-19 business loans, some of which he used on gambling excursions to Las Vegas and transferred to his stock trading accounts.

Andrew Marnell, 43, was sentenced by United States District Judge R. Gary Klausner, who scheduled a restitution hearing for August 28.

Marnell pleaded guilty in September 2021 to one count of bank fraud and one count of money laundering.

From March 2020 to July 2020, Marnell schemed to defraud lenders and the Small Business Administration (SBA) by submitting fraudulent loan applications under the Paycheck Protection Program (PPP), which Congress designed to aid businesses feeling the economic impact of the COVID-19 pandemic, and another SBA loan program called the Economic Injury Disaster Loan Program (EDL).

Marnell’s bogus loan applications contained numerous false and misleading statements about his shell companies’ business operations and payroll expenses. Marnell, often using aliases, submitted fake and altered documents to obtain the small business loans, including bogus federal tax filings and employee payroll records.

In total, Marnell submitted applications for PPP loans in amounts exceeding $10 million and lenders funded nearly $9 million in loans to his fake companies. In addition, Marnell requested EDL loans from the SBA in the amount of $320,000, and of that amount, $170,000 was funded.

Once Marnell obtained the illicitly obtained loans, he used the money for gambling, including at a Las Vegas casino and in stock market trades, and for purchasing luxury goods. As part of his plea agreement with federal prosecutors, Marnell agreed to forfeit his ill-gotten gains, including Rolex watches, multiple laptop computers and tablets, a Range Rover automobile, a Ducati motorcycle, and hundreds of thousands of dollars in cash. The government also seized more than $1.5 million from various Marnell-controlled accounts, including those used to trade in the stock market.

“As soon as the federal government declared a national emergency and took action to respond to the COVID-19 pandemic, [Marnell] started scheming to steal relief funds intended to save small businesses from going bankrupt and millions of individuals from losing their jobs,” prosecutors argued in a sentencing memorandum. “[Marnell] was one of the first people arrested in this district for pandemic-related fraud, and thus he was one of the first out of the proverbial gate to start defrauding programs designed to provide emergency assistance and relief to those impacted by the pandemic, including owners of small businesses.”

The Federal Housing Finance Agency Office of Inspector General; the FBI; the Federal Deposit Insurance Corporation Office of Inspector General; IRS Criminal Investigation; the Treasury Inspector General for Tax Administration; and the Small Business Administration Office of Inspector General investigated this matter. The California Department of Justice Bureau of Gambling Control provided assistance in the investigation.

Assistant United States Attorney Kerry L. Quinn of the Major Frauds Section prosecuted this case.

Anyone with information about allegations of attempted fraud involving COVID-19 can report it by calling the Department of Justice’s National Center for Disaster Fraud Hotline at (866) 720-5721 or via the NCDF Web Complaint Form at: https://www.justice.gov/disaster-fraud/ncdf-disaster-complaint-form.
Deadly flooding hits several countries, scientists said this will be increasingly common

**POLICE STANDOFF**

In the second incident a woman with a gun prompted a five-hour standoff with police at a downtown motel.

SMPD was called to the American Motel on the 1200 block of Lincoln Blvd. at about noon on Sunday for a report that a female guest had barricaded herself in her room and was in possession of a gun.

The department deployed its BearCat tactical vehicle and deployed its mobile command center while using a loudspeaker to repeatedly ask the suspect to exit her room. Other guests were evacuated and individuals in nearby buildings were asked to stay inside while the street was closed for the duration of the call.

Eventually, the female suspect surrendered to SMPD without further incident. She was taken into custody and will undergo a mental health evaluation. The street and neighboring blocks were reopened early Sunday evening.

**Stymied by the Supreme Court, Biden wants voters to have the final say on his agenda**

**ISABELLA O’MALLEY, BRITTANY PETERSON AND DREW COSTLEY**

**Associated Press**

Schools in New Delhi were forced to close Monday after heavy monsoon rains battered the Indian capital, with landslides and flash floods killing at least 15 people over the last three days. Farther north, the overflowing Beas River swept vehicles downstream as it flooded neighborhoods.

In Japan, torrential rain poured the southwest, causing floods and mudslides that left two people dead and at least six others missing Monday. Local TV showed damaged houses in Fukuoka prefecture and muddy water from the swollen Yamakuni River appearing to threaten a bridge in the town of Yabakei. In Ulster County, in New York’s Hudson Valley and in Vermont, some said the flooding is the worst they’ve seen since Hurricane Irene’s devastation in 2011.

Although destructive flooding in India, Japan, China, Turkey and the United States might seem like distant events, atmospheric scientists say they have this in common: Storms are forming in a warmer atmosphere, making extreme rainfall a more frequent reality now.

The additional warming that scientists predict is coming will only make it worse.

That’s because a warmer atmosphere holds more moisture, which results in storms dumping more precipitation that can have deadly outcomes. Pollutants, especially carbon dioxide and methane, are heating up the atmosphere. Instead of allowing heat to radiate away from Earth into space, they hold onto it.

While climate change is not the cause of storms unleashing the rainfall, these storms are forming in an atmosphere that is becoming warmer and wetter.

“Sixty-eight degrees Fahrenheit can hold twice as much water as 50 degrees Fahrenheit,” said Rodney Wynn, a meteorologist at the National Weather Service in Tampa Bay.

“Warm air expands and cool air contracts. You can think of it as a balloon - when it’s heated up, it’s going to get larger, so therefore it can hold more moisture.”

For every 1 degree Celsius, which equals 1.8 degrees Fahrenheit, the atmosphere warms, it holds approximately 7% more moisture. According to NASA, the average global temperature has increased by at least 1.1 degrees Celsius (1.9 degrees Fahrenheit) since 1880.

“When a thunderstorm develops, water vapor gets condensed into rain droplets and falls back down to the surface. So as these storms form in warmer environments that have more moisture in them, the rainfall increases,” explained Brian Soden, professor of atmospheric sciences at the University of Miami.

Along Turkey’s mountainous and scenic Black Sea coast, heavy rains swelled rivers and damaged cities with flooding and landslides. At least 15 people were killed by flooding in another mountainous region, in southwestern China.

“As the climate gets warmer we expect intense rain events to become more common, it’s a very robust prediction of climate models,” Soden added. “It’s not surprising to see these events happening, it’s what’s models have been predicting ever since day one.”

Gavin Schmidt, climatologist and director of the NASA Goddard Institute for Space Studies, said the regions being hit hardest by climate change are not the ones who emit the largest amount of planet-warming pollutants.

“The bulk of the emissions have come from the industrial western nations and the bulk of the impacts are happening in places that don’t have good infrastructure, that are less prepared for weather extremes and have no real ways to manage this,” said Schmidt.

It looks like things are going to be abnormally dry over the next couple of months.
- Sam Meltzer National Weather Service meteorologist

**DANGER**

Jenni Vanos, an associated professor at ASU’s School of Sustainability.

There are 10 thermal mannequins in existence, with most used by athletic clothing companies for testing. ASU’s manikin is the first that can be used outdoors thanks to a unique, internal cooling channel.

The university also has developed a new “warm room,” or heat chamber where researchers can simulate heat-exposure scenarios from around the globe. Temperatures can reach 140 F (60 C) inside the room — and wind and solar radiation can be controlled for experiments.

Vanos said measuring short- and long-wave radiation in the environment can also tell researchers how much a surface — or a person — in a specific location of a city would heat up.

“And so under these extreme conditions, what’s going to really be able to be modified or changed within the urban environment is shade,” she said. “In a place like Phoenix or really any sunny hot area, shade is really a critical factor to be able to reduce that overall heat load of the human body.”

**FINDING RELIEF**

While air conditioners are cranked up and fans are blowing full blast, residents across the region are anxiously awaiting the start of the monsoon season, hoping it will help keep the heat at bay. But so far this year, the summer thunderstorms — which usually bring cloud cover, lightning and downpours to the Southwestern desert — are absent due to the ongoing El Niño weather pattern in the region, National Weather Service meteorologist Sam Meltzer said.

“It looks like things are going to be abnormally dry over the next couple of months,” Meltzer said, noting that storms that might break the heat depend on wind patterns drawing moist air from the Gulf of California into Arizona, New Mexico and Nevada.

“But that doesn’t mean we aren’t going to get thunderstorm activity,” Meltzer said. “It just might be delayed.”

Meltzer worked in Phoenix before transferring last winter to Las Vegas. He noted that while temperatures rose last month in the Phoenix area, June stayed abnormally cool in southern Nevada.

The official daytime temperature at Harry Reid International Airport in Las Vegas remained below 100 F (37.8 C) for a record 294 days before temperatures reached 102 F (38.9 C) on June 30. The previous record of 290 days, from 1964 to 1965, had stood for 58 years.

Associated Press writers Ken Ritter in Las Vegas and Walter Berry in Phoenix contributed to this report.

“So over this journey, I’ve had the pleasure of meeting 23 different families,” he said. “They actually invited me into their homes and made me a part of their family for a night or two and you know, just being able to share that experience with other people has made the trip.”

At his final destination in Santa Monica, friends and family gathered to celebrate and watch him dip his unicycle into the water.

“Seeing my dad here and some family friends came by to surprise me and just be able to share that moment and experience with the people I love really brought everything full circle,” he said. “That really makes you realize that’s what’s important in life.”

Oakley’s goal is to raise $5,000 for the Wounded Warrior Project, in honor of their physical and mental services.

“A little goes a long way in seeing the joy in people’s faces,” he said.

He said his next adventure is just getting home.

“You know, I can’t fly with this thing because of the big batteries so I’m hoping to take a train or might even have to rent a car and take a road trip,” he said.

**HEAT**

with the National Weather Service (NWS) forecasting highs of up to 112 degrees in some places. The area’s deserts, lower mountains and interior valleys are specifically warned of triple digit heat while coastal communities can expect highs in the 70s to mid 80s.

“Warm, dry and breezy conditions will continue across the area through today, focused across the desert, lower mountains, and interior valleys,” said NWS on Monday.

“Daytime high temperatures are expected to peak around 85 to 95 degrees. Hot and very dry conditions will bring elevated fire weather conditions for interior areas, potentially bringing rapid plume dominated fire growth with any new fire starts.”

While locals won’t experience dangerous heat, complications from a regional heat wave may well emerge in Santa Monica.

Inland he will likely heat up at bare visitor’s beach for day trips and potentially in the evening or overnight. Those visitors may increase traffic, particularly at freeway exits and locals should be prepared for some delays.

Officials said it’s important to drink plenty of fluids, stay in an air-conditioned room, stay out of the sun, and check up on relatives and neighbors in extreme heat situations.

Young children and pets should never be left unattended in vehicles under any circumstances and extra monitoring may be needed if you work or spend time outside.

Experts say that when possible reschedule strenuous activities to early morning or evening.

**CRIME**

station aired video of criminals breaking into a Bay Area visitor’s rental car in broad daylight, stealing the contents and driving away.

Bonta and the man who appointed him attorney general before he won reelection in November, Gov. Gavin Newsom, have acknowledged some ambivalent postures about crime. They lament its effects on victims and take some public crime-fighting steps while championing criminal justice reform to reduce traditional punishment of those caught breaking the law.

A day before the crime data were released, Newsom dispatched more California Highway Patrol officers to battle open air drug dealing in San Francisco, a city he once governed as mayor.

In decades past, spikes in crime have had major impacts on California’s political atmosphere — helping Republicans become dominant in the 1980s, for example. Were crime to continue on its currently upward path, it could once again “become a game-changing political factor.”

**COURT**

Democrats are now finally understanding the power of judges as a voting tool, and Biden has made judicial nominations a priority, appointing a record number of judges for a president at this point in his first term, including some of the most diverse picks yet to the judiciary. Biden aide plans on highlighting those accomplishments during the reelection campaign, but acknowledge it’s only a small salve to their troubles at the high court.

Biden has taken to warning voters about what else the Supreme Court might do in the future, whether rolling back same-sex marriage rights or access to contraception.

“President Biden is being direct with the American people about the stakes these extreme decisions that jettison decades of longstanding precedent have for their fundamental freedoms and their daily lives,” said White House spokesman Andrew Bates.

Part of Biden’s unwillingness to go further to reshape the Supreme Court comes from a sense of history. Those pushing social change stood by the court after Brown v. Board of Education, a major civil rights case, and even Roe v. Wade, holding up its autonomy as a way to push forward. Backing away from that, particularly for an establishment Democrat like Biden, is not easy.

As Biden said in an interview with MSNBC, “I think if we start the process of trying to expand the court, we’re going to politicize it maybe forever in a way that is not healthy.”

Leah Litman, a professor of law at the University of Michigan and co-host of “Strict Scrutiny” podcast about the Supreme Court, said that while Biden was unlikely to do so, “there are a variety of things that Democratic politicians could run on that would actually allow them to more explicitly push back against the court.”

Besides expanding the size of the Supreme Court and or the lower courts, she said, other options include stripping the Supreme Court of jurisdiction over certain cases, setting term limits and implementing ethics changes.

All of them, she said, are things the party could embrace “as part of their recognition that the court has politicized itself.”

**FUNDRAISER**

fortunate to not have faced combat, not many veterans had that kind of luxury and he said he wanted to recognize their sacrifices.

“Yeah so this kind of all started out as just self discovery, kind of figuring out what I was capable of on my own and you know, it started out that way and along my journey I figured out what it make it a part of something bigger than myself and I started to raise awareness and even some money for the Wounded Warrior Project.”

The organization began in 2003 as a small, grassroots effort providing simple care and comfort items to the hospital bedsides of the first wounded service members returning home from the wars in Iraq and Afghanistan. The group has evolved and today they offer mental health, career counseling, and long-term rehabilitative care, along with advocacy efforts to improve the lives of millions of warriors and their families.

Oakley said it was physically challenging to stand on his device for the duration of the trip that started in South Carolina and he learned some lessons along the way, like riding into a headwind isn’t a great idea on a unicycle, but he values the people he met.

Instinct takes over and you won’t be able to explain your certainty, but it drives you to take bold action. First you endeavor with great passion, then life rises to meet your pursuit. More highlights: The funding comes in and then some, an abundance of sweet times and love overflowing, and overdue and very satisfying reckoning. Pisces and Scorpio adore you. Your lucky numbers are: 11, 4, 19, 16 and 3.

ARIES (March 21-April 19). You don’t think of yourself as remarkably unique, but you are doing life differently from those around you. You bend the conventions into a lifestyle that makes you smile. Celebrate and nurture that nonconformist part of yourself.

TAURUS (April 20-May 20). The success secrets aren’t so secret after all. A Google search uncovers just about everything you need to know. It’s not the information but what you do with it that matters. Use it like sunscreen. Apply a little every day.

GEMINI (May 21-June 21). Socializing is always a risk, even with people you know well, and that’s what makes it fun. You never can quite tell how people are going to react. Though you neither seek nor expect to delight others today, you’ll accomplish this.

CANCER (June 22-July 22). Most addictions are, in one way or another, an addiction to comfort. Once you agree to discomfort, you are free to break patterns and open your options.

LEO (July 23-Aug. 22). Lucky outcomes spring up wherever you focus your creativity. You are an artist becoming enamored with your masterpiece. Creative expression reveals your innermost thoughts and feelings — and invites you to learn new aspects of yourself.

VIRGO (Aug. 23-Sept. 22). So many short-term pleasures offer a high followed by a crash. Finding healthy things to want is challenging in a world of artificial flavors of every variety. Today offers a guilt-free gift: What’s good for you also happens to be exciting.

LIBRA (Sept. 23-Oct. 23). You will be packing a bag, studying for an upcoming test or carefully getting ready in some other way to face the unknown. Where there is preparation, there will be no regret. Tonight, you’ll delight in making people laugh.

SCORPIO (Oct. 24-Nov. 21). Did science come from poetry or did poetry come from science? Either way, a lovely and satisfying melding of the two happens in your world, giving a feeling that all is coming together for a higher purpose.

SAGITTARIUS (Nov. 22-Dec. 21). People who are very familiar with one another will have a hard time listening well because they assume they already know the drill. Avoid problems by double- and triple-checking the communication.

CAPRICORN (Dec. 22-Jan. 19). It’s strange to think that there was a time in which your favorite people were completely unknown to you. It’s as good a reason as any to be friendly to strangers.

AQUARIUS (Jan. 20-Feb. 18). Lucky moves include cleaning, organizing and taking inventory. Remembering what you have will make you feel grateful and also keep you from accidentally buying things you don’t really need.

PISCES (Feb. 19-March 20). What if the most important work of the day is figuring out how to have fun? It doesn’t seem like it should be a difficult thing to set up, and yet, since each individual is different, fun takes a bespoke kind of effort.

Newsday Crossword

ACROSS
1 Upper note for a soprano
6 “For heaven’s ___!”
10 Sandpaper coating
14 Love, in France
16 Colorful part of a 20 Across
17 Easy-to-read book format
