1.0 Summary of Release Version 3.16

The SMARTdiagnostics® Version 3.16 Release will be installed on December 18, 2020. This release will be installed during our regular maintenance hours and should be complete by 8:00 AM EDT. Users should have little to no interruption to their use of the SMARTdiagnostics® software during this time. Should you experience any issues, please check the current status listed on the KCF Status Page for updates before reaching out to our Support Team.

This document will detail the changes made to SMARTdiagnostics® Version 3.16 as well as bug fixes addressed in this release. Please note that users may not have access to all features listed in this document dependent upon each facility's configuration and setup. If you are interested in learning more about a feature or functionality, please contact your Sentry Solutions Team or Support for more information.

2.0 Enhancements to Existing Functionality

Software enhancements include changes to existing functionality to increase usability or performance. It's important to review these changes to understand the impact they may have to your current processes as they may incorporate screen or navigation changes.

2.1 Hardware Email Times Use Time Zone from User's Profile Setting

Times in the hardware emails now use the time zone selected in the user's profile settings so that emails are easier to understand. The email has been updated to list the time zone used for time displays for further clarity.

3.0 New Features

New features include functionality that did not previously exist in the software and are based on feedback from our users or industry need. This functionality may require configuration changes to the system, additional setup or possibly specific hardware so please review the information to understand requirements for use.

No new features have been added to this release.

4.0 New Reports

Reports allow users to view and export information from the system so it can be viewed or pull the data to be used in other formats.

No changes or new reports have been made for this release.

5.0 Public API

No changes have been made to the Public API in this release.

6.0 Bug Fixes

The following Bugs reported by our users have been addressed in this release:

- Bug 22426 – Network Sensor Status Search is Producing a 500 Error
- Bug 22963 – Release Day Hardware Alert Spam
