

Narrative

The project involves replacing existing open-style 4-foot high gates with solid-panel 6-foot high cedar gates in the exact same locations. The new gates are necessary to increase privacy and security given recent and repeated theft incidents. The new gates will be constructed of cedar with traditional styling (vertical planks). The work is located entirely at the rear of the property and does not alter any street-facing elevations.

Material Specifications

New gates will be composed of cedar. The cedar gates will initially be left unfinished to allow the wood to acclimate. Applying a clear or natural-toned protective stain is planned to improve durability. The gates will not be painted. Gate hardware will be matte black for to achieve a traditional look consistent with the house style.
