**Interested in getting heat pumps at
your house?** Learn more about resources
and incentives at this webinar!

Date: Wednesday, July 29, 2026

Time: 12:00pm

**Register in
advance:**

Air source heat pumps are systems for both heating and cooling that use electricity, fans, and the refrigeration cycle (the same principle that keeps your fridge cold) to move heat into or out of a home. They are highly efficient and modern cold climate heat pumps can still produce heat in subzero temperatures.
