1. PROJECT OVERVIEW

This proposal outlines arboricultural services to enhance safety, tree structure, and long-term tree health at Prospect Hill Park. All work follows ANSI A300 standards.

Park Summary and Overview:

All trees listed should be pruned to provide 6'-8' of clearance off the buildings, and fixed structures, as well as raise 8'-10' over the walkway and lawn areas. Remove dead branches 2" and larger, remove apparent broken branches. There are (2) dying/diseased Locust Trees inside park that we are recommending for removal. We have identified the recommended removals in the scope of work provided. We identified two trees with potential girdling roots and compacted soil that we recommend Air Spading and Root Pruning. We have identified two trees that will benefit from soil fertilizer. A Soil Sample will be taken from multiple points throughout the park and submitted for testing.
