## Part 2b. Description of Payment Card Business

| | |
|---|---|
| Describe how and in what capacity your business stores, processes, and/or transmits cardholder data. | Spreedly, Inc. (Spreedly) owned and operated a web payments application programming interface (API), which provided a hosted payment card account vaulting and tokenization solution.<br><br>The Spreedly API accepted cardholder data (CHD) from consumers and from Spreedly's merchant customers and provided a low-value (non-sensitive) token in the response to the client application that issued the request. Tokens could be used immediately for one-time transactions or could be used for recurring transactions. For one-time transactions, Spreedly retained only the last four digits of the PAN. For recurring transactions, Spreedly retained the entire PAN. The Spreedly API also supported bulk CHD upload for batch encryption and tokenization.<br><br>Consumers and merchant customers transacted using any number of payment gateways through the Spreedly API.<br><br>Spreedly developed the AU feature as a process to update Visa, Mastercard and Discover card accounts in an organization's vault. The AU submitted card data in a vault to the card brands twice monthly, then received and stored the updated PAN and/or expiration date. |
| Describe how and in what capacity your business is otherwise involved in or has the ability to impact the security of cardholder data. | Spreedly did not provide services, other than those described above, with the ability to impact the security of CHD for other entities. |
