

Our Approach

SRECTrade provides EV charging networks, developers and clients, comprehensive fuel credit registration, management and monetization services.

We make it easy to register, manage and navigate the regulatory and administrative complexities of the western clean fuels markets. Our services strive to facilitate a return on investment on your EV fleet or charging station portfolio through low-carbon fuel standard (LCFS) credit management and transaction services.

SRECTrade Key Facts

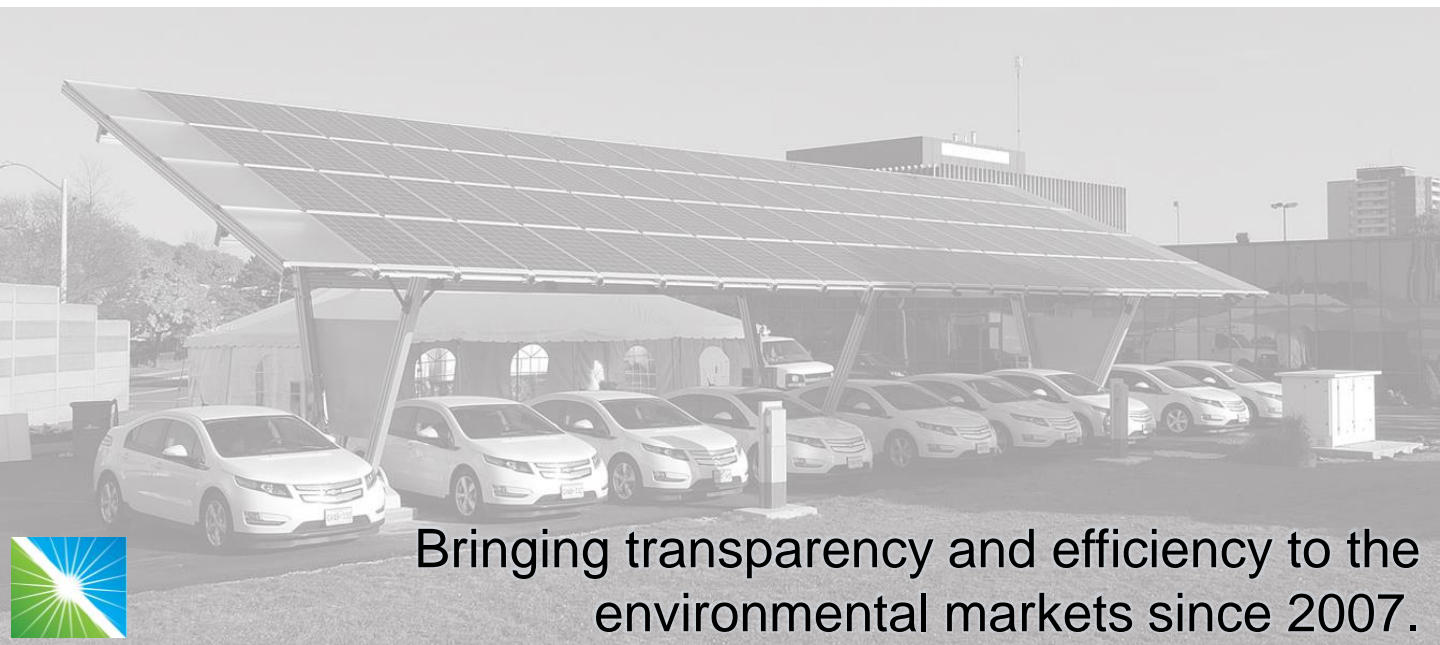

- Over 1.7 GW of energy facilities managed
- Since 2007, more than 150,000 energy assets utilize SRECTrade's management or technology services
- Domain experts in navigating complex environmental markets
- Largest third party manager and aggregator of distributed energy resources
- Combined 50+ years experience in the energy and environmental markets, finance, and technology

Simple and Transparent

With more than 1.7 GW of facilities under management in our secure online platform, our service enables sound management of your projects with full transparency over how your credits are sold.

Strong Experience & Service Focused

With experience in the energy commodity markets since 2007, our team is able to access the best transaction opportunities for our clients. We charge a percentage based management fee. This fee structure aligns us with our client's interests to sell credits at the highest price possible. We solely act in an agency capacity and do not take a principal position in the markets.

Bringing transparency and efficiency to the environmental markets since 2007.
