Smart Strategies to Simplify Mobile Asset Disposition from the Global Leader in Electronics Reuse and Recycling

THE BYPRODUCTS OF PRODUCTIVITY

Not too long ago, only company executives were assigned corporate-owned mobile phones. But in today's always-on business environment, the use of mobile devices by employees at every level is necessary to maintain an organisation's ability to rapidly respond to shifting market conditions and customer demands.

This increased use of mobile phones, smartphones, and tablets combined with short refresh cycles likely means you have a large inventory of broken, end-of-life, or surplus mobile devices that still have value and could be earning you cash. With our professional team of technicians and remarketing specialists, Sims Recycling Solutions can help you realise the highest return possible on these devices.

OUR APPROACH TO RECYCLING PROTECTS YOU AND THE ENVIRONMENT

Sims Recycling Solutions responsibly remarkets and recycles electronics and mobile devices for local, national, and global organisations. Our worldwide network of wholly owned certified processing facilities uses closed-loop practices and guarantees the complete destruction of digital data. This approach reinforces our commitment to provide secure, sustainable, and environmentally sound solutions for retired devices.

A TRUSTED PARTNER DELIVERING COMPLETE SOLUTIONS

When you retire mobile assets, you want a vendor that can deliver cost-effective solutions without compromising data security, environmental standards, or financial returns.

Our global network of strategically located and wholly owned facilities staffed by skilled technicians allows us to offer an unbroken chain of custody for your mobile devices. This means your assets spend less time in transit, undergo a full range of refurbishment and recycling services without the use of subcontractors, and you experience the convenience of having a single point of contact with a single vendor. This same global network and breadth of services can be used to maximise the revenue you earn from obsolete mobile devices.

OUR TECHNICIANS TRANSFORM DEVICES FROM FLAWED TO FLAWLESS

Our skilled technicians can repair and refurbish the majority of mobile devices – even those that appear to be damaged beyond repair—to like-new condition. *We can fix or replace glass screens, including Gorilla Glass, and reapply the oil-resistant coating to touch screens to ensure repaired devices deliver optimal performance. Besides cosmetic repairs, our technicians test for and resolve hardware and software problems. They perform software flashing, install software upgrades, unbrick damaged software, and unroot modified software. To deliver products that garner higher resale prices from buyers, we offer kitting services to outfit refurbished mobile devices with original packaging and accessories.

WE ARE POSITIONED GLOBALLY TO SERVE YOU LOCALLY

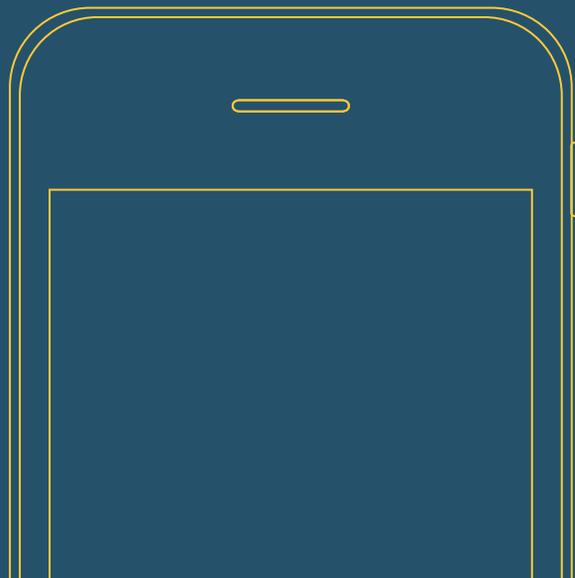

We think logic should play a part in logistics and that is why we offer secure, flexible, and efficient services scaled to meet your specific needs, whether you have a handful of devices or a truckload. Retired mobile assets are at their most vulnerable during shipment, so to protect them, the sensitive data they may contain, and, ultimately, your brand name and reputation, we adhere to Transported Asset Protection Association standards. To further safeguard your assets, we have hired the personnel and installed the equipment necessary to provide effective security at every one of our sites 24 hours a day, seven days a week.

WE ARE ABLE TO HANDLE YOUR DATA DESTRUCTION CHALLENGES

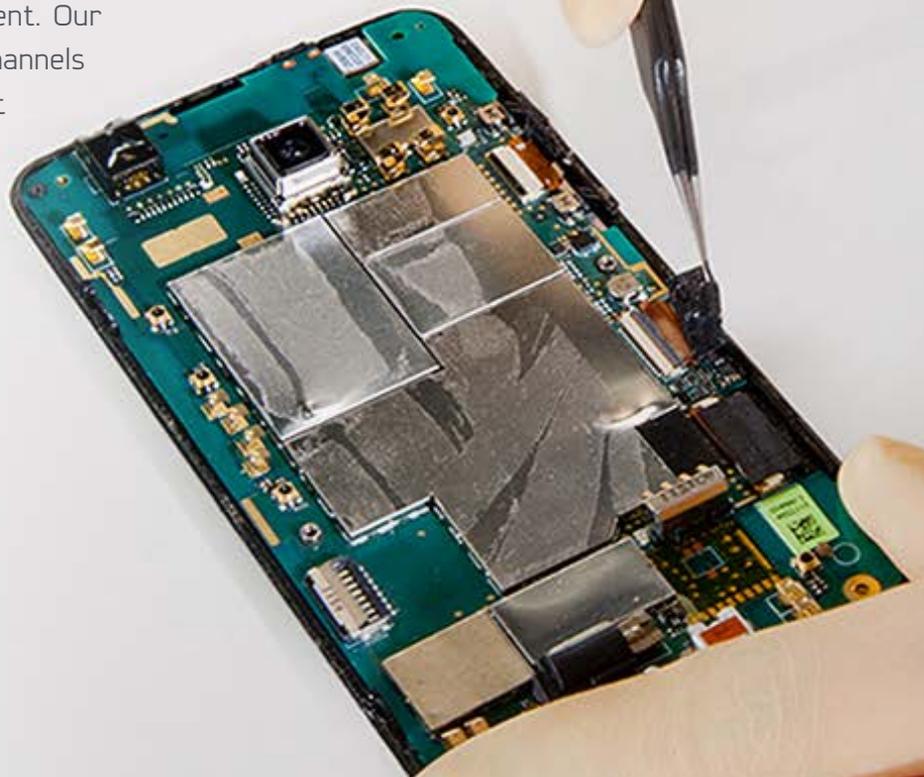

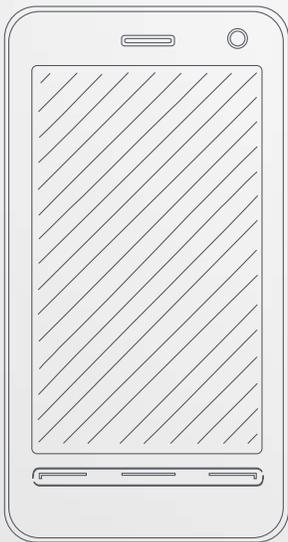

Mobile devices present unique and significant data security challenges for two reasons: the amount of data they store and the way they store that data. Sims removes flash memory and uses forensically tested data erasure processes to permanently remove all data and prepare these devices for redeployment or resale.

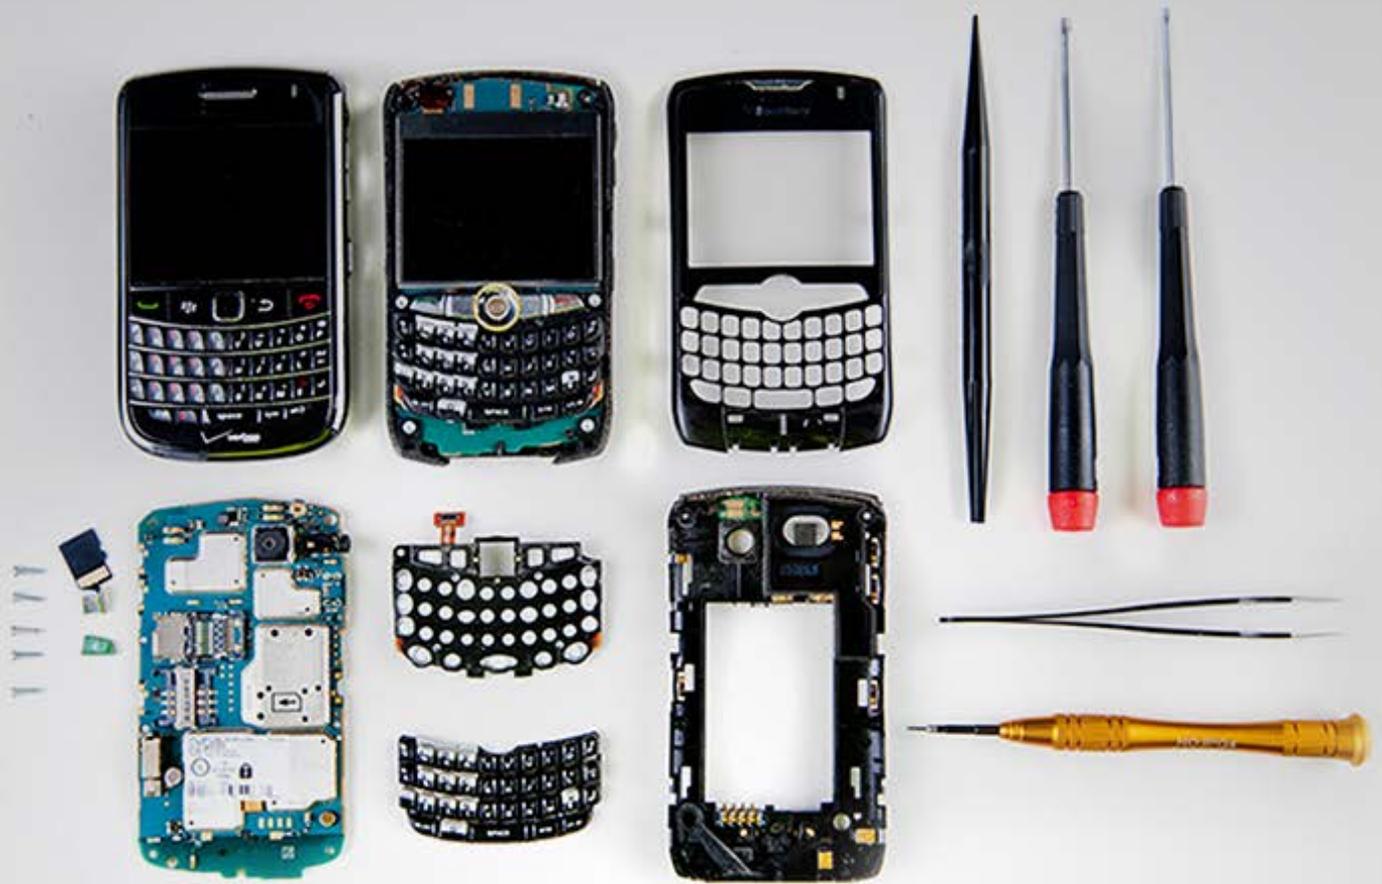

These comprehensive data destruction services ensure your confidential information is never compromised and have earned us the trust of corporations, government agencies, and military and law enforcement authorities. We can tailor a program to meet your data security, compliance, and reporting requirements.

REDEPLOYED OR RESOLD, REFURBISHED PHONES OFFER TWO ROUTES TO REVENUE

After our technicians delete data, repair defects, and test software, your mobile devices are ready to be redeployed within your organization or sold – the choice is yours. Redeploying refurbished devices reduces the need to purchase new ones, and demonstrates fiscal and environmental responsibility. Selling unwanted devices generates new revenue and increases financial return on your original mobile technology investment. Our wholesale and retail distribution channels ensure the best prices and fastest payments for your mobile devices.

OUR RECYCLING PROCESSES SUPPLY MATERIAL FOR THE NEXT BIG THING

In the event we receive mobile devices that are broken beyond repair or too old to warrant repair, we dismantle them and recover reusable components for refurbishing other devices or recycle them ensuring the best environmental outcome. The remaining precious metals and other materials are separated and recycled. Recognised for our innovative technology, sustainable operations, and certified facilities, we offer environmentally responsible recycling of all scrap mobile equipment, which converts waste into material suitable for use in next-generation electronics.

REAL-TIME REPORTS KEEP YOU INFORMED

You need confirmation that your equipment was handled according to your specifications. Our detailed reports ensure accountability and allow you to demonstrate compliance with corporate objectives and regulatory obligations. Our customised asset inventory reports capture model, serial number, electronic serial number, and location information for every mobile device we collect from you and give you the ability to track those assets during every step of the process. These reports can be securely accessed by using our online customer portal, which also makes it easy to view account information, schedule pickups, or determine order status.

A woman with long dark hair, wearing safety glasses and a white lab coat over a red turtleneck, is focused on a small black device in her gloved hands. In the background, another person is blurred, working at a workstation under a bright lamp. The setting appears to be a laboratory or a technical workspace.

WE ARE COMMITTED TO EXCEEDING YOUR EXPECTATIONS

There are many companies that can recycle your broken, end-of-life, or surplus mobile devices, but there are very few able to guarantee you that your sensitive data is secure, your environmental liability is eliminated, your brand reputation is protected, and your compliance obligations are met. Sims Recycling Solutions is able to make this pledge because we own the process from beginning to end. We have the facilities, capacity, equipment, and expertise to meet your every mobile device reuse, resale, and recycling need, globally or locally.
