

BAGGU

Leather Care Info Sheet

COLOR TRANSFER

Because many of the leathers we use are unfinished, it is possible that some color transfer will occur, especially with our colored and black leathers. Please take extra care with light colored clothing. Before first use, we suggest rubbing the surface of the bag with a terry towel to lift up any extra dye residue.

Likewise, our lighter colored leathers are more susceptible to picking up color transfer from other materials, such as darker colored leather, denim, and the natural oils from your hands.

Conditioning your bag as outlined below can help to coat the leather and alleviate color transfer.

CONDITIONING

In order to preserve the beautiful look of our unfinished leather bags, we recommend conditioning prior to use. Possible conditioners include mink oil, saddle soap, or weather guard spray. Mink oil and saddle soap may cause some darkening to occur and we suggest testing a small amount on an inconspicuous area, such as the inside of the handles, before applying conditioner to the entire bag.

Please do not condition your suede leather bag or treat with any type of oil (see SUEDE section at right).

CLEANING

If you would like to clean your bag, we suggest professional leather cleaning, though there are various spot removers and cleaners that can be used for slight stains and general maintenance. Natural leather colors can be especially difficult to get stains out of. Darker, pigmented leather colors will show less wear over time.

If using a cleaner spray, make sure to use a soft terry cloth or sponge, and spray onto the cloth rather than directly on the leather.

See special instructions for cleaning suede leather below.

SUEDE

Please do not condition your suede leather bag or use any other type of oil.

Weather guard spray is an option that can be used for both leather and suede. Use a bristled suede brush for maintenance and cleaning.
