State Population: Winners and Losers

The U.S. population was 328,239,523 in 2019, an increase of 0.5% over 2018. This was the fourth consecutive year of slowing population growth due to fewer births, more deaths, and lower immigration from other countries. Forty states and the District of Columbia gained population, while 10 states lost population. Here are the winners and losers based on percentage increase or decrease in population.

Investor Psychology: Behavioral Biases That Can Lead to Costly Mistakes

The field of behavioral finance focuses on the emotional and cognitive aspects of investing. In recent decades, well-known economists have advanced the theory that investors' decisions can be driven by human emotions such as greed and fear, which helps explain why asset prices sometimes fluctuate erratically.¹

It can be difficult to act rationally when your financial future is at stake, especially when unexpected events upset the markets. But understanding certain aspects of human nature, and your own vulnerabilities, might help you stay levelheaded in the heat of the moment.

Every investment decision should take your financial goals, time horizon, and risk tolerance into account. That's why it's important to slow down and try to consider all relevant factors and possible outcomes.

Here are six behavioral biases, which could also be called mental shortcuts or blind spots, that might lead you to make regrettable portfolio decisions.

1. Herd mentality. Many people can be convinced by their peers to follow trends, even if it's not in their own best interests. When investors chase returns and follow the herd into "hot" investments, it can drive up prices to unsustainable levels and create asset bubbles that eventually burst. Joining the crowd and fleeing the stock market after it falls, and/or waiting too long (until prices have already risen) to reinvest, could harm your long-term portfolio returns.

2. Availability bias. People tend to base their judgments on information that immediately comes to mind. This could cause you to miscalculate risks or expected returns. In the same way that watching a movie about sharks can make it seem more dangerous to swim in the ocean, a recent news article can shape how you perceive the quality of an investment opportunity.

3. Confirmation bias. People also have a tendency to search out and remember information that confirms, rather than challenges, their current beliefs. If you have a good feeling about a certain investment, you may be more likely to ignore critical facts and focus on data that supports your opinion.

4. Overconfidence. Some individuals overestimate their skills, knowledge, and ability to predict probable outcomes. When it comes to investing, overconfidence may cause you to trade excessively and/or downplay potential risks.

5. Loss aversion. Many investors dislike losses much more than they enjoy gains. Because it actually feels bad to experience a financial loss, you might avoid selling an investment that would realize a loss, even though it might be an appropriate course of action. An intense fear of losing money may even be paralyzing.

Market Moods

Retirees and higher-net-worth investors were more likely than other groups to say that their daily mood is sensitive to changes in their investment portfolios. The following chart illustrates the percentage of U.S. investors who say the performance of their investments affects their daily mood (a little or a lot).

Source: Gallup, 2019

6. Anchoring effect. When making decisions, people often depend heavily on the first information they receive, then adjust from that starting point based on new data. For investors, this translates into placing too much emphasis on an initial value (or purchase price) or on recent market performance. Investors who were "anchored" to the financial crisis may still be fearful of the stock market, even after years of strong returns. Another investor who has only experienced years of gains might be inclined to take on too much risk.

Even the most experienced investors can fall into these psychological traps. Having a long-term perspective and a thoughtfully crafted investing strategy may help you avoid expensive, emotion-driven mistakes. It might also be wise to consult an objective third party, such as a qualified financial professional, who can help you detect any biases that may be clouding your judgment.

All investing involves risk, including the possible loss of principal, and there is no guarantee that any investment strategy will be successful. Although there is no assurance that working with a financial professional will improve investment results, a financial professional can provide education, identify strategies, and help you consider options that could have a substantial effect on your long-term financial prospects.

Keeping Cool: Investment Strategy vs. Reaction

After losing ground in 2018, U.S. stocks had a banner year in 2019, with the S&P 500 gaining almost 29% — the highest annual increase since 2013.¹ It's too early to know how 2020 will turn out, but it's been rocky so far, and you can count on market swings to challenge your patience as an investor.

The trend was steadily upward last year, but there were downturns along the way, including a single-day drop of almost 3% on August 14. That plunge began with bad economic news from Germany and China that triggered a flight to the relative safety of U.S. Treasury securities, driving the yield on the 10-year Treasury note below the 2-year note for the first time since 2007. A yield curve inversion has been a reliable predictor of past recessions and spooked the stock market.² By the following day, however, the market was back on the rise.³

It's possible that a yield curve inversion may no longer be a precursor to a recession. Still, larger concerns about the economy are ongoing, and this incident illustrates the pitfalls of overreacting to economic news. If you were also spooked on August 14, 2019, and sold some or all of your stock positions, you might have missed out on more than 13% equity market growth over the rest of the year.⁴

Tune Out the Noise

The media generates news 24 hours a day, seven days a week. You can check the market and access the news anywhere you carry a mobile device. This barrage of information might make you feel that you should buy or sell investments in response to the latest news, whether it's a market drop or an unexpected geopolitical event. This is a natural response, but it's not wise to react emotionally to market swings or to news that you think might affect the market.

Stay the Course

Consider this advice from John Bogle, famed investor and mutual fund industry pioneer: "Stay the course. Regardless of what happens to the markets, stick to your investment program. Changing your strategy at the wrong time can be the single most devastating mistake you can make as an investor."⁵

This doesn't mean you should never buy or sell investments. However, the investments you buy and sell should be based on a sound strategy appropriate for your risk tolerance, financial goals, and time frame. And a sound investment strategy should carry you through market ups and downs.

It can be tough to keep cool when you see the market dropping or to control your exuberance when you see it shooting upward. But overreacting to market movements or trying to "time the market" by guessing at future direction may create additional risk that could negatively affect your long-term portfolio performance.

All investments are subject to market fluctuation, risk, and loss of principal. When sold, investments may be worth more or less than their original cost. U.S. Treasury securities are guaranteed by the federal government as to the timely payment of principal and interest. If not held to maturity, they could be worth more or less than the original amount paid.

Long-Term Commitment

"Time in the market" is generally more effective than trying to time the market. An investor who remained fully invested in the U.S. stock market over the past 30 years would have received almost triple the return of an investor who missed the best 12 months of market performance.

Source: Refinitiv, 2020, S&P 500 Composite Total Return Index for the period 12/31/1989 to 12/31/2019. The S&P 500 is an unmanaged group of securities that is considered to be representative of the U.S. stock market in general. The performance of an unmanaged index is not indicative of the performance of any specific investment. Individuals cannot invest directly in an index. This hypothetical example is used for illustrative purposes only and does not consider the impact of taxes, investment fees, or expenses. Rates of return will vary over time, particularly for long-term investments. Actual results will vary. Past performance does not guarantee future results.

The ABCs of Finance: Teaching Kids About Money

It's never too soon to start teaching children about money. Whether they're tagging along with you to the grocery store or watching you make purchases online, children quickly realize that we use money to buy the things we want. You can teach some simple lessons today that will give them a solid foundation for making a lifetime of sound financial decisions.

Start with an Allowance. An allowance is often a child's first brush with financial independence and a good way to begin learning how to save money and budget for the things they want. How much you give your children will depend in part on what you expect them to buy and how much you want them to save. Make allowance day a routine, like payday, by giving them a set amount on the same day each week or month.

Help Them Set Financial Goals. Children might not always appreciate the value of putting money away for the future. Help them set age-appropriate short- and long-term financial goals that will serve as incentives for saving money. Write down each goal and the amount that must be saved each day, week, or month to reach it.

Teach younger children some simple lessons today that will give them a solid foundation for making a lifetime of sound financial decisions.

Let Them Practice. As children get older, they can become more responsible for paying other expenses (e.g., clothing, entertainment). The possibility of running out of money between allowance days might make them think more carefully about their spending habits and choices and encourage them to budget more effectively.

Take It to the Bank. Piggy banks are a great way to start teaching young children to save money, but opening a bank savings account will reinforce lessons on basic investing principles such as earning interest and the power of compounding. Encourage your children to deposit a portion of any money they receive from an allowance, gift, or job into their accounts.
