

Wall Street Solutions with Main Street Values

GROWTH & INCOME PORTFOLIO

We have created outcome based, proprietary investment models that are designed to pursue real life objectives. We build portfolios based on investor needs, which have a conservative bias and that can deliver impactful results.

Helping our clients properly manage market risk is our most important role. It's why we believe in a more dynamic, proactive approach to portfolio management. It's one that calls for strategic asset allocation, tactical overweighting and underweighting of each component, and short-term adjustments to each client's long-term strategy.

Growth and Income Portfolio: rising dividends strategy

Objective

Our Growth and Income Portfolio seeks to achieve a greater return than the S&P 500 over a complete market cycle while experiencing below average volatility. This fundamentally driven strategy targets companies that either have a dividend yield above the S&P 500 or a historical bias of dividend growth and payout consistency. We believe that (a) the annual growth in the dividends will significantly outpace inflation and (b) stocks of dividend growers also have more potential to appreciate in price.

Domestic

Benchmark:
S&P 500 – 100%

Investment strategy

This strategy utilizes our proprietary research techniques to find ETF and mutual fund solutions. Our proprietary methodology and execution not only creates short-term investment opportunities within the portfolio but, more importantly, reduces the amount of risk taken. We also believe our thematic asset allocation tilts and active rebalancing will reduce volatility and add to the total portfolio return over the long-term.
