Week ending May 17, 2024

The equity markets saw record highs this week following some optimistic news on the inflation front. Wednesday's release of the April Consumer Price Index (CPI) came in below expectations with a monthly increase of 0.3%. Core CPI, which excludes the volatile food and energy sectors, was reported in line with analyst estimates and fell to its lowest reading in 3 years. While the data is still not at the Federal Reserve's annualized target level of 2.0%, the reading was the first in four months that did not exceed economists' estimates.

Fixed Income Markets Overview

- U.S. Treasury yields fell in response to the CPI data on hopes that cooling inflationary pressures may result in rate cuts later this year.
- Other economic data during the week included a flat retail sales number for April. The market had been expecting an increase of 0.4%.
- On Tuesday, Fed Chairman Jerome Powell restated recent inflation data had been higher than expected, so the Fed will continue to be patient before suggesting any rate cuts. Powell did state he does not anticipate the Fed will have to make any future rate increases.
