

# Keep a long-term perspective

Not every financial account that goes down in value stays down. In fact, history shows that financial markets eventually recover with time.\* Rather than making drastic moves at the first sign of trouble, here's some practical wisdom designed to help you recover well in the wake of challenging downturns.

## Stay invested for the long haul

The chart below shows two decades' worth of stock and bond market performance. While markets saw some alarming dips, they also rallied periodically for strong gains and ultimately moved forward in an upward

trajectory. We also see a potential benefit of diversification\*\* at work. The green line, which represents a portfolio composed of both stocks and bonds, generated higher returns than an all-bond or all-cash portfolio with less volatility than an all-stock portfolio.

### GROWTH OF A HYPOTHETICAL \$10,000 INVESTMENT OVER TIME

As of December 31, 2024

Over a 20-year period, stocks and bonds have each experienced their own periods of dips and rallies—though, ultimately, they've continued on an upward trajectory over time.

The stock market has delivered positive returns for every rolling 15-year period covered in our analysis.

A 60/40 asset allocation of stocks and bonds may allow investors to achieve greater levels of growth than an all-bond or all-cash portfolio, while reducing exposure to the volatility of an all-stock portfolio.

## Short-term pain, long-term gain

Remember, long-term investment goals require a long-term perspective, particularly during periods of heightened market volatility. While it's hard to watch your portfolio fluctuate with the ups and downs of the market, sticking with your long-term strategy may pay off over time.
