

Ultramid® (PA)

Product Range
(Europe)

 - **BASF**

We create chemistry

Ultramid® (PA)

BASF's Ultramid® grades are molding compounds on the basis of PA6, PA66 and various co-polyamides such as PA66/6. The range also includes PA610 and partially aromatic polyamides such as PA6T/6. The molding compounds are available unreinforced, reinforced with glass fibers or minerals and also reinforced with long-glass fibers for special applications. Ultramid® is noted for its high mechanical strength, stiffness and thermal stability. In addition, Ultramid® offers good toughness at low temperatures, favorable sliding friction behavior and can be processed without any problems. Owing to its excellent properties, this material has become indispensable in almost all sectors of engineering for a wide range of different components and machine elements, as a high-grade electrical insulation material and for many special applications.

Easy flowing injection-molding grade for fast processing. Uses include highly stressed technical parts such as bearings and gear wheels; also electrically insulating parts such as terminals and cable connectors.

Free-flowing, heat aging resistant and rapidly processable grade for technical parts subject to high stress such as bearings and bearing cages, gearwheels, spool bodies and cable connectors.

Impact-modified and stabilized injection-molding grade for components and housings with good low temperature impact resistance.

Highly heat aging resistant, medium-viscosity injection-molding grade for highly stressed parts such as bearing cages, gearwheels, spool bodies and cable connectors.

Glass-fiber reinforced and heat aging resistant injection-molding grade for machine elements and housings of medium stiffness. For electric insulating parts, preference should be given to the grades A3EG3.

Glass-fiber reinforced injection-molding grade for machine elements and housings of high stiffness and dimensional stability such as spool bodies and bearing cages as well as for electric insulating parts.

Glass-fiber reinforced and heat aging resistant injection-molding grade for machine elements and housings of high stiffness and dimensional stability such as spool bodies, sensors and bearing cages as well as for electric insulating parts.

Glass-fiber reinforced and heat aging resistant injection-molding grade for machine elements and housings of high stiffness and dimensional stability such as spool bodies and bearing cages. For electric insulating parts, preference should be given to grades A3EG5 and A3HG5.

Glass-fiber reinforced injection-molding grade for machine elements and housings of high stiffness and dimensional stability such as fans, insulating profiles for aluminum windows as well as for electric insulating parts, electronic housings. As FC grade suitable for food contact.

Glass-fiber reinforced and heat aging resistant injection-molding grade for machine elements and housings of high stiffness and dimensional stability such as oil pans, cylinder head covers, sensors, fans and insulating profiles for aluminum windows. For electric insulating parts, preference should be given to grade A3EG6.

Glass-fiber reinforced injection-molding grade with enhanced hydrolysis resistance, e. g., for applications in vehicle cooling systems and sensors.

Glass-fiber reinforced injection-molding grade for machine elements and housings of high stiffness and dimensional stability such as heat pump housings, electronic housings instantaneous water heaters as well as for electric insulating parts, as FC grade suitable for food contact.

Glass-fiber reinforced and heat aging resistant injection-molding grade, e. g. for parts and components with high stiffness and dimensional stability as well as electrically insulating parts.

Glass-fiber reinforced and heat aging resistant injection-molding grade for technical articles such as gearwheels, solenoid valve housings, cable contacts, oil pans, cylinder head covers, engine brackets, chassis stiffeners and components for automotive gear shifting systems.

Glass-fiber reinforced injection-molding grade with enhanced resistance to hydrolysis and heat ageing, e. g. for applications in the automotive cooling circuit and battery cooling.

Glass-fiber reinforced and heat-aging resistant injection-molding grade for industrial items such as gear wheels, solenoid valve housings, cable attachments, automotive fuel distributors, cylinder head covers and components for automotive gearshift.

Ultramid® injection-molding grades without flame retardants

Reinforced Ultramid® A grades

Glass-fiber reinforced injection-molding grade for technical articles of very high stiffness as well as for electric insulating parts.

Glass-fiber reinforced injection-molding grade with high heat aging resistance for technical articles of very high stiffness, e.g. motor brackets or gearbox carriers.

Combined glass-fiber and mineral-fiber reinforced injection-molding grade for the manufacture of parts having high stiffness and good dimensional stability as well as surface quality, for example, cylinder head covers for vehicles.

Impact-modified, glass-fiber reinforced injection-molding grade.

Ultramid® injection-molding grades without flame retardants

Easy flowing and stabilized injection-molding grade used for technical parts e.g. machinery components or fans.

Impact-modified, free-flowing and rapidly processable injection-molding grade for dry impact-resistant technical articles, e.g. housings, fittings and wall plugs.

Easy flowing, finely crystalline injection-molding grade for very fast processing. Uses include thin-walled technical parts e.g. housings, fittings, grips, and fixing clamps.

Injection moulding grade, easy flowing, short cycle time, dry-impact, conditioning free technical moulded parts.

Injection moulding grade with good melt flowability, very high impact, moulded parts with particular demands made on the impact resistance and the notched impact resistance also at lower temperatures (e.g. ski boots and sport shoes).

Glass-fiber reinforced injection-molding grade, e.g. for household appliances.

Glass-fiber reinforced injection-molding grade for industrial articles and electrical insulating parts.

Glass-fiber reinforced and heat aging resistant injection-molding grade, e.g. for fan impellers.

Glass-fiber reinforced injection-molding grade for technical articles as well as for electric insulating parts, e.g. Sensors.

Glass-fiber reinforced and heat aging resistant injection-molding grade, e.g. for vehicle intake manifolds and pedals.

Glass fibre reinforced and heat ageing resistant injection moulding grade with excellent flowability used e.g. for plastic parts in automotive or E&E industry. The product offers a high purity regarding ionic and halogen containing compounds minimizing potential corrosion processes to protect sensitive electronic components.

Ultramid® injection-molding grades without flame retardants

Reinforced Ultramid® B grades

Glass-fiber reinforced and heat aging resistant injection-molding grade, e.g. for vehicle intake manifolds and pedals.

Glass-fiber reinforced injection-molding grade for pedals or pedal modules

Glass-fiber reinforced and heat aging resistant injection-molding grade for technical parts with very high stiffness.

Glass fibre reinforced and heat ageing resistant injection moulding grade with high flowability and excellent surface quality for structural parts with very high stiffness requirements.

Impact-modified and glass-fiber reinforced injection-molding grade, e.g. for automotive cable conduits.

Impact-modified and glass-fiber reinforced injection-molding grade for technical articles of very high stiffness and toughness, e.g. for vehicle airbag housings and housings for power tools.

Glass-fiber reinforced injection-molding grade, high surface quality and dimensional stability, as metal replacement for technical articles of very high stiffness, e.g. water meter housings. Material approvals for contact with water and food.

Glass fiber reinforced blow moulding grade with good sagging behaviour, ideal swelling and excellent heat ageing resistance up to at least 220 °C for tubes in the charge air duct mainly.

Glass fiber reinforced injection moulding grade with high stiffness, very good flowability, and excellent heat ageing resistance up to at least 220 °C for technical articles.

Glass fiber reinforced injection moulding grade with high stiffness, very good flowability, and excellent heat ageing resistance up to at least 220 °C for technical articles.

Heat stabilized long-chain polyamide for injection-molding, low water absorption, especially high hydrolysis, chemical and stress cracking resistance.

Injection moulding grade with good melt flowability, very high impact, moulded parts with particular demands made on the impact resistance and the notched impact resistance also at lower temperatures (e.g. ski boots and sport shoes).

Injection moulding grade with good melt flowability, very high impact, moulded parts with particular demands made on the impact resistance and the notched impact resistance also at lower temperatures (e.g. ski boots and sport shoes).

Glass-fiber reinforced injection-molding grade, low water absorption, especially high hydrolysis, chemical and stress cracking resistance, e.g. for quick connectors.

For injection-molding and extrusion, exhibiting high toughness, strength and stiffness, high melting point (295°C [563°F]). The mechanical properties remain constant after moisture absorption up to a temperature of 60°C [140°F].

Glass-fiber reinforced product for injection-molding; high toughness, strength and stiffness, high melting point (295°C [563°F]). The mechanical properties remain constant after moisture absorption up to a temperature of 60°C [140°F], for instance, for brush collars (electric motors).

Glass-fiber reinforced product for injection-molding; high toughness, strength and stiffness, high melting point (295°C [563°F]). The mechanical properties remain constant after moisture absorption up to a temperature of 60°C [140°F], for instance, for automotive valve housings.

Glass-fiber reinforced product for injection-molding; high toughness and rigidity; high melting point (285°C); mechanical properties remain constant up to 60°C after moisture absorption; suitable e.g. for valve housings.

Glass-fiber reinforced, impact-modified product for injection-molding; high toughness, strength and stiffness, high melting point (295°C [563°F]). The mechanical properties remain constant after moisture absorption up to a temperature of 60°C [140°F], for instance, for automotive plug-in connectors.

High, constant stiffness and strength over a temperature range of -40 °C to over 80 °C as well as resistance against aggressive media.	Partially aromatic polyphthalamide for injection molding and extrusion. Very low water absorption, excellent chemical resistance and good mechanics at high temperatures in conditioned state. Ultramid® Advanced N3HG6 with good flowability, for E&E applications, JEDEC class 1.	Partially aromatic polyphthalamide for injection molding. Very low water absorption, excellent chemical resistance and good mechanics at high temperatures in conditioned state. Ultramid® Advanced N4H has an outstanding dimensional stability and resistance, even against wear and abrasion.	Partially aromatic polyphthalamide for injection molding. Very low water absorption, excellent chemical resistance and good mechanics at high temperatures in conditioned state. Ultramid® Advanced N4WG7 with high toughness and outstanding heat resistance, for Automotive applications.

An easy flowing injection moulding grade for fast processing. Used for highly stressed technical parts, such as bearings, gear wheels and electrically insulating parts such as terminals and cable connectors.

Injection moulding grade with improved flame retardance (free from halogens), used e.g. for electrical insulating parts with very small wall thicknesses.

An injection moulding grade with improved flame retardance (free from halogens), used e.g. for impact resistant electrical insulating parts such as contact bases and plug connector strips.

An easy flowing, finely crystalline injection moulding grade for very fast processing. Parts produced include thin-walled technical parts (eg housing, fittings, grips, small parts and fixing clamps).

Without halogenes and red phosphorus a flame retarded glass fiber reinforced injection moulding grade; light in colour with outstanding mechanical and electrical properties.	Without halogenes flame retarded glass fiber reinforced injection moulding grade; light colorable; outstanding mechanical and electrical properties.	Glass fibre reinforced injection moulding grade with improved flame retardance based on red phosphorus, giving outstanding mechanical and electrical properties for components requiring high stiffness.	An impact-modified, glass fibre reinforced injection moulding grade with improved flame retardance based on red phosphorus; for components requiring high stiffness and enhanced toughness. (eg PV-connectors an PV-junction boxes).	Glass fibre fibre reinforced injection moulding grade with improved flame retardance. Flame retardant based on red phosphorus; giving outstanding electrical properties and very high stiffness and strength.

Glass fibre reinforced injection moulding grade with improved flame retardance. Flame retardant based on red phosphorus; giving outstanding electrical properties and very high stiffness and strength.

An halogen-free flameretardant injection molding grade with outstanding free-flow properties, with good electrical properties and low smoke density; resistant to glow wire test GWFI to 960 °C.

Halogen-free flameproofed injection molding grade with outstanding free-flow properties and good electrical properties; resistant to glow wire test to 960 °C.

Without halogenes flame retarded glass fiber reinforced injection moulding grade; light colorable; outstanding mechanical and electrical properties. In particular optimized for the glow wire requirements of IEC 60335.

Halogen-free injection molding grade with very high rigidity, low smoke density and outstanding electrical properties.

Ultramid® injection-molding grades with flame retardants

Reinforced Ultramid® T grades and Ultramid® Advanced grades

A glass fibre reinforced, flame retardant, partially aromatic polyamide for injection molding. Good mechanical properties, low water absorption, high melting point (295 °C). High tracking resistance, low tendency to form deposits on electrical contacts, very resistant to electrolytic corrosion, resistant to soldering temperatures, can be electroplated.

Partially aromatic polyamid, halogen-free flame-retardant, light colorable, outstanding flame retardance, resistant to soldering temperatures.

Partially aromatic polyphthalamide, halogen-free flame retardant, glass fiber reinforced with strong electrical and mechanical properties at elevated temperatures and excellent chemical resistance. Very low water absorption and outstanding dimensional stability. Perfectly suited for soldering due to high melting point. Easy processing due to excellent flowability and melt stability.

Nomenclature

Structure

The name of Ultramid® commercial products generally follows the scheme below:

Subnames

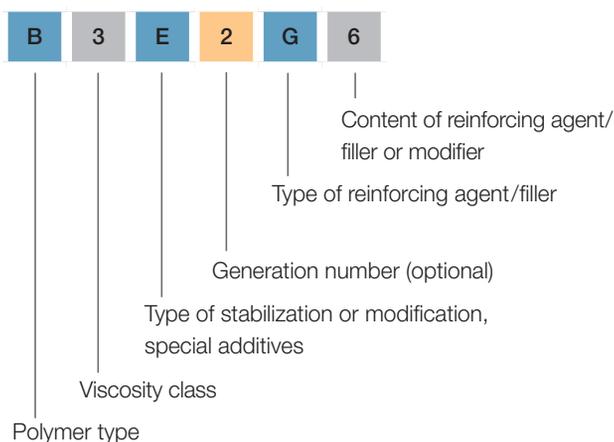

Subnames are optionally used in order to particularly emphasize a product feature that is characteristic of part of a range.

Examples of subnames:

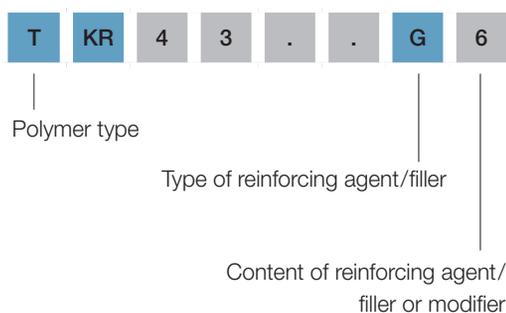

Endure	Particularly good long-term stabilization against hot air
Structure	Particularly good notched impact strength at low temperatures, and with out any disadvantages for the stiffness and strength
Vision	significantly increased translucence in the visible range
Advanced	polyphthalamide
Deep Gloss	high-gloss with increased abrasion resistance and UV stability

Technical ID

The technical ID is made up of a series of letters and numbers which give hints about the polymer type, the melt viscosity, the stabilization, modification or special additives and the content of reinforcing agents, fillers or modifiers. The following classification scheme is found with most products:

Ultramid® T generally has the following classification scheme:

Letters for identifying polymer types

A	Polyamide 66
B	Polyamide 6
C	Copolyamide 66/6
D	Special polymer
S	Polyamide 610
T	Polyamide 6T/6

Numbers for identifying viscosity classes

- 3 Free-flowing, low melt viscosity, mainly for injection-molding
- 35 Low to medium viscosity
- 4 Medium viscosity

Letters for identifying stabilization

- E, K Stabilized, light natural color, enhanced resistance to heat aging, weather and hot water, electrical properties remain unaffected
- H Stabilized, enhanced resistance to heat aging, hot water and weather, only for engineering parts, electrical properties remain unaffected, depending on the grade light-beige to brown natural color
- W Stabilized, high resistance to heat aging, can only be supplied uncolored and in black, less suitable if high demands are made on the electrical properties of the parts

Letters for identifying special additives

- F Functional additive
- L Impact-modified and stabilized, impact resistant when dry, easy flowing, for rapid processing
- S For rapid processing, very fine crystalline structure, for injection-molding
- U With flame-retardant finish without red phosphorus
- X With red phosphorus as the flame-retardant finish
- Z Impact-modified and stabilized with very high low-temperature impact strength (unreinforced grades) or enhanced impact strength (reinforced grades)

Letters for identifying reinforcing agents/fillers

- C Carbon fibers
- G Glass fibers
- K Glass beads
- M Minerals
- GM Glass fibers in combination with minerals
- GK Glass fibers in combination with glass beads

Key numbers for describing the content of reinforcing agents/fillers or modifiers

- 2 approx. 10% by mass
- 3 approx. 15% by mass
- 4 approx. 20% by mass
- 5 approx. 25% by mass
- 6 approx. 30% by mass
- 7 approx. 35% by mass
- 8 approx. 40% by mass
- 10 approx. 50% by mass

In the case of combinations of glass fibers with minerals or glass beads, the respective contents are indicated by two numbers, e. g.

- GM53 approx. 25% by mass of glass fibers and approx. 15% by mass of minerals
- GK24 approx. 10% by mass of glass fibers and approx. 20% by mass of glass beads

M602 represents approx. 30% by mass of a special silicate (increased stiffness).

Suffixes

Suffixes are optionally used in order to indicate specific processing or application-related properties. They are frequently acronyms whose letters are derived from the English term.

Examples of suffixes:

Aqua®	Meets specific regulatory requirements for drinking water applications
Balance	Based at least partly on renewable raw materials
BM	Blow moulding grade
CR	Crash Resistant
EQ	Electronic Quality
FC	Food Contact; meets specific regulatory requirements for applications in contact with food
GIT	Gas Injection Technology
GP	General Purpose
GPX	New generation „General Purpose“
High Speed	High flowability of the melt
HP	High Productivity
HR	Hydrolysis Resistant, increased hydrolysis resistance
HRX	New generation of HR products
LFX	Long Fiber Reinforced
LS	Laser Sensitive, can be marked with Nd:YAG laser
LT	Laser Transparent, can be penetrated well with Nd:YAG lasers and lasers of a similar wavelength
SF	Structural Foaming
SI	Surface Improved, for parts with improved surface quality
ST	Super Tough
WIT	Water Injection Technology

Color

The color is generally made up of a color name and a color number.

Examples of color names:

Uncolored
Black 00464
Black 00564
Black 20560
