

ACIDOPHILUS PLUS

Beneficial (“good”) intestinal bacteria promote health, discourage the growth of disease-causing (“bad”) bacteria and pathogenic fungi, and improve the balance of microbes which normally inhabit our intestines. Many beneficial bacteria transform naturally occurring sugars, especially lactose, into lactic acid, promoting a more balanced and stable intestinal environment. As one of the most abundant sources of lactose is milk, these beneficial bacteria have been used for thousands of years to produce yoghurt, cheese, and fermented milks. Both science and folklore support the healthful roles of these foods. NeoLife’s supplement of beneficial bacteria, Acidophilus Plus, combines potency with technology to guarantee that live organisms survive the stomach acid and reach the intestines to deliver five billion viable organisms capable of supporting optimal digestive tract function.

#2791, 60 capsules

NeoLife Scientific Advisory Board

Why Beneficial Bacteria?

- Beneficial bacteria help **maintain a healthy balance of a variety of microorganisms** in the intestines.
- Beneficial bacteria help **produce vitamins** and, through an indirect mechanism, **boost resistance to infection and disease**.
- Cultured dairy products (yoghurt, cheese, fermented milks), produced through the actions of beneficial bacteria, have been **used throughout the world for centuries to support health**.

Why NeoLife's Acidophilus Plus?

- **Whole-food-derived.** Contains beneficial bacteria isolated from cultured dairy foods to support a healthful balance of microorganisms in the gastrointestinal tract.
- **Broad-spectrum.** Delivers five types of beneficial, lactic acid-producing bacteria: *Lactobacillus acidophilus*, *Lactobacillus bulgaricus*, *Lactobacillus casei*, *Bifidobacterium bifidum*, and *Streptococcus thermophilus*.
- **Concentrated.** As many beneficial bacteria as 10 servings of yoghurt.
- **Potency guaranteed.** Each capsule is filled with five billion live organisms and protected for delivery to the intestines. NeoLife’s bacterial strains are cultivated under strict conditions to guarantee high levels of active bacteria - much higher numbers than are found in a serving of cultured dairy foods! In fact, one capsule of Acidophilus Plus contains as many beneficial bacteria as 10 one-cup servings of yoghurt.

- **Active cultures.** Exclusive Gel-Guard protection system assures that the maximum number of live bacteria survive the stomach acid and reach the site of action, the intestines. When the capsule encounters the acidic environment of the stomach, it dissolves and the contents of the capsule form an insoluble matrix which protects the bacteria. When the stomach contents reach the intestines, the Gel-Guard matrix is dissolved and the bacteria are released. The active cultures are delivered exactly where they must act to exert their healthful effects!
- **Convenient.** Each bottle contains a 60 day supply. Whereas dairy products are limited in their shelf-life, NeoLife’s Acidophilus Plus has an extended shelf-life if stored as recommended (i.e., stored in a cool, dry place and refrigerated after opening). And while cultured dairy products can be inconvenient to transport, store and sometimes, even locate, Acidophilus Plus is easy to take anywhere your busy lifestyle takes you! Taking just one capsule of Acidophilus Plus each day is a convenient way to help maintain a constant, healthful balance of intestinal flora.
