

AMI-TONE

Based upon scientific research into the body's normal function of tissue generation and lipid metabolism, Ami-Tone creates a dietary abundance of specific amino acids at preselected times and under controlled conditions. This allows us to influence the conditions and relative amino acid balances that support utilisation of fat for energy and the production of lean body tissue. Ami-Tone supports the efforts of those seeking to decrease their body fat content.

Support for the utilisation of fat for energy and the production of lean body tissue

- Certain nutrients help support fat mobilisation and lean muscle retention and development.
- Working in sync with the body's natural cycles and creating specific amino acid ratios in the bloodstream, can contribute to the mobilisation of fat and development of lean tissue.

Why NeoLife's Ami-Tone?

- **100% free form amino acids** include L-arginine and L-Ornithine for rapid absorption and utilisation.
- **Complete formula** containing free form amino acids, chelated minerals and selected herbs

- **Supports muscle protein retention, fat mobilisation,** lean tissue development and overall body toning.
- **Valerian and Chickweed** to support overall product function and performance.
- **Designed to work while you sleep.** Taken 3 hours after your last meal and before bedtime, Ami-Tone allows for increases in blood levels of specific amino acids in the absence of competing amino acids.
- **Allow the body to do the work,** improving success with a sensible eating pattern and regular, moderate exercise.
