

How to collect a fecal sample from your pet:

Please collect the sample as fresh as possible off the ground to prevent contamination. For felines collect as fresh as possible out of litter box. You can use a disposable spoon or bag to collect the sample.

Keep the sample in a sealed and clean container or bag.

We need approximately 1 tablespoons of sample to check for parasites.

Sample can be dropped off up to 12 hrs after collection.

Keep the fresh sample in a cool place like a refrigerator. Please make sure the sample is not frozen.

**** Please drop off samples no later the 5PM Monday- Friday**
