

Optomap Retinal Exam Consent

We all want to protect our gift of sight. Annual eye examinations not only allow our doctors to improve the quality of your vision by updating the prescription of your glasses or contact lenses, but we also determine the overall health of your eyes from the front (the cornea) to the back of the eye (the retina).

At **Hamlin Eye Care** we are proud to offer Optomap Retinal Exam to all our patients. The Optomap Retinal Exam allows us to see the retina in ways never seen before.

The Optomap Retinal Exam:

***Fast, Easy, Comfortable**

***No Blur, No Dilation, No Light Sensitivity, No Stinging Drops**

***Provides a permanent record to compare and track potential eye disease**

***Allows for an in-depth, multi-layered view of the retina to detect eye disease, such as glaucoma, macular degeneration, high blood pressure, and diabetes**

I have read and understand the benefits of the Optomap Retinal Exam. I understand that a wide field view of my retina is **highly recommended by the doctors at Hamlin Eye Care** and is an important part of my comprehensive exam.

_____ Yes, I elect to have the recommended Optomap of my retina for **\$39**.

AND

Dilation allows for us to assess your risk for eye conditions or other disorders. **Dilating drops have a few side effects, all of which last approximately four to six hours.** These include blurry near vision and increased sensitivity to sunlight. Blurry distance vision may occur, but patients usually feel comfortable driving with their glasses or contact lenses. If you refuse the Optomap Retinal Exam and dilation, there is a much greater chance that an eye disease could remain undetected.

_____ Yes, I understand the side effects and agree to have my eyes dilated.

_____ No, I understand the risk factors and refuse to have my eyes dilated.
