Please read this entire document prior to signing it. It is important that you understand the information contained in this document. Please ask questions before you sign if there is anything that is unclear.

The nature of the chiropractic adjustment.

The primary treatment I use as Doctor of Chiropractic is spinal manipulative therapy. I will use that procedure to treat you. I may use my hands or a mechanical instrument upon your body in such a way as to move your joints. That may cause an audible “click” or “pop”, much as you have experienced when you “crack” your knuckles. You may feel a sense of movement.

Analysis / Examination / Treatment

As a part of the analysis, examination and treatment, you are consenting to the following procedures:

- Spinal Manipulative Therapy ·Palpation ·Vital Signs ·Range of Motion Testing
- Orthopedic Testing ·Ultrasound ·Postural Analysis ·Muscle Strength Testing
- Hot/Cold Therapy ·EMS ·Radiographic Studies ·Basic Neurological Testing
- Massage Therapy ·Manual Therapy ·Myofascial Release ·Trigger Point Therapy

The material risks inherent in chiropractic adjustment

As with any healthcare procedure, there are certain complications which may arise during chiropractic manipulation and therapy. These complications include, but are not limited to: fractures, disc injuries, dislocations, muscle strain, cervical myelopathy, costovertebral strains and separations and burns. Some types of manipulations of the neck have been associated with injuries to the arteries in the neck, leading to or contributing to serious complications, including stroke. Some patients may feel some stiffness and soreness during the first few days after treatment. I will make every reasonable effort during the examination to screen for contraindications to care; however, if you have a condition that would otherwise not come to my attention, it is your responsibility to inform me.

The probability of those risks occurring

Fractures are rare occurrences and generally result from underlying weakness of the bone which I check for during the taking of your history, examination and x-ray. Stroke has been the subject of tremendous disagreement. The incidences of stroke are exceedingly rare, and are estimated to occur between one in one million and one in five million cervical adjustments. The other complications are also generally described as rare.

The availability and nature of other treatment options

Other treatment options may include, but are not limited to:

- Self administered, over-the counter analgesics and rest ·Hospitalization
- Medical care and prescription drugs such as anti-inflammatory, muscle relaxers and pain killers ·Surgery

The risks and dangers attendant to remaining untreated

Remaining untreated may allow the formation of adhesions and reverse mobility, which may cause a pain reaction further reducing mobility. Over time, this process may complicate treatment making more difficult and less effective the longer it is postponed.
