*“I just want more smile and less gums!”*

## GUMMY SMILE SURGERY & YOUR SMILE

---

You take the photo album down from the shelf and start flipping through the pages. As you pass through dozens of photos, you start to realize something. In every picture, you are not showing your teeth. No gums, no smile, always hesitating. The theme of your days becomes more and more evident as you turn more pages of the album.

Quite simply, you know that your smile isn't what you want it to be. It is too gummy. Every time you smile, you notice that your gums stand out more than your teeth. “What can I do about this gummy smile?” you mumble to yourself as you stare at your reflection in the mirror. “I just want more smile and less gums!” you announce.

Luckily, Dr. Gloria Ospina is here in Miami to serve just those needs. Dr. Ospina is one of the fore-leaders on gummy smile surgery. Not only does she specialize in cosmetic laser surgery, but she has created her own technique that is patent pending. If you are looking for the best in gummy smile surgery, then you do not have to look any further than to Gables Perfect Smile!

Dr. Gloria Ospina can turn your gummy smile into a smile that you are proud of for a lifetime. But what does the procedure entail? What makes Gables Perfect Smile the perfect place for your gummy smile surgery? What are the risks and the success rate to the surgery? All of these questions and more will all be answered in Dr. Ospina's gummy smiles eBook, so keep reading to have all of your inquiries answered!

## WHAT IS GUMMY SMILE SURGERY?

---

Gummy smile surgery combines multiple techniques to create the smile that you have always wanted, but never thought possible. Through lip-repositioning, crown lengthening, bone surgery, Invisalign, or a combination of the four, your smile can go through the ultimate transformation.

But before any of the surgeries and procedures can commence, Dr. Gloria Ospina starts with a consultation. This consultation is of utmost importance, and sets Dr. Ospina's practice apart from the rest. Why is the consultation so critical? Keep reading to find out more!

## WHY ARE OUR CONSULTATIONS SO IMPORTANT?

*Your first visit marks the beginning of your new smile. During your consultation, Dr. Ospina analyzes your smile from top to bottom. Usually, the following events happen during this visit:*

**Photographs and X-rays-** Dr. Ospina needs to see the exact state of your smile. Photos are taken of your smile, ranging from your natural, gentle smile to a huge comedy size grin. These photos help Dr. Ospina evaluate how much gum is visible with varying levels of smiling.

**Analyzation-** with the photographs, Dr. Ospina is able to analyze the size and the position of your teeth, how much gum you have, and how thick your lips are. From this analysis, Dr. Ospina can diagnose if a patient needs crown lengthening, and/or altering of the lower lip to a different position.

**Diagnosis-** with the diagnosis, Dr. Ospina takes everything into account. Your facial symmetry, mouth symmetry, and what surgery options would work best for you. Dr. Ospina takes the time to evaluate if you would benefit from bone removal, Invisalign, crown lengthening with veneers, lip reposition, or a combination of the processes. This diagnosis process is critical to allow for any issues to be worked out from the get-go. Unlike many other dentists, Dr. Ospina is able to avoid misdiagnosis so that you experience perfect results, the first time. Taking the time for analysis makes the biggest difference for your smile results!

## WHAT ARE DR. GLORIA OSPINA'S TECHNIQUES?

---

*Dr. Gloria Ospina has a variety of techniques for gummy smile surgery. This variety of techniques allows for every patient to have the best results possible with procedures that work for the individual. Dr. Ospina has developed her own technique, her own protocol, and her procedure that yields only the best success rates!*

### TECHNIQUES

**Lip Repositioning-** this procedure is also known as high-lip line corrective surgery. During this procedure, Dr. Ospina removes a piece of the tissue against the gum and against the soft gingiva. This technique releases the muscles underneath the gums and the lips rolls up, with the help of a small suture. Dr. Ospina then adds Botox to the muscles that elevate the lip. This extra step ensures that the lip remains in place, and that the sutures remain in place. And, as an extra bonus, your lips become fuller, plumper, and look their absolute best!

**Crown Lengthening-** the procedure of crown lengthening can actually reduce the gum line. Dr. Ospina measures every single tooth to see how much of your gum needs to be removed. After these careful calculations have been made, Dr. Ospina can then remove the additional gum and in some cases, add veneers to the teeth that are shorter. In turn, you can have a fuller more beautiful smile, with less gum showing!

**Bone Surgery-** bone surgery allows for Dr. Ospina to raise the gums and reduce the amount of bone in a smile. By using a water laser and ultrasound, Dr. Ospina can dramatically reposition bone mass that impacts the smile. The bone can become flat, and in-turn, the teeth can reposition. With the latest water laser and ultrasound technology, this procedure can be completed with less pain than ever before. What's not to smile about?

**Invisalign-** did you ever think that your gummy smile could be treated with invisible braces? Invisalign can help reposition your teeth and eliminate the appearance of gums. Through a detailed course of action, Dr. Ospina plans your course of care out from beginning to end, and can analyze if Invisalign could work for you. Dr. Ospina has had a multiple success stories with gummy smile patients and Invisalign-- see if it could be right for you!

---

*All of these techniques have been created, practiced, and perfected by Dr. Ospina with the patient in mind. Dr. Ospina only uses techniques that deliver the best results to ensure that the client is always satisfied.*

---

# WHAT ARE SOME OF THE PATIENT CONCERNS?

---

When the word 'surgery' pops up, most people immediately associate it with trauma and pain. Dr. Gloria Ospina is trying to change that connotation by combining high technology and no trauma. How is that possible? Dr. Ospina makes certain to take the extra precautions that keep you pain-free and complication-free.

Dr. Ospina gives her patients a medication to control inflammation. This medication ensures that you do not experience unnecessary swelling post-procedure.

At Gables Perfect Smile, Dr. Ospina has experienced absolutely no medical complications with her patients. With the addition of Botox to the procedures, there is no risk of the sutures tearing out with laughing or smiling.

In addition, all of the gummy smile surgery procedures are reversible. That's right! You do not have to lock into the procedure if you are not satisfied. Dr. Ospina can use another technique called Vestoplasty tissue release to bring your old smile back. If you do not like how your smile looks post-gummy smile surgery, then you do not have to keep it for your lifetime\*.

\*As a side note, Dr. Ospina has never had any one request that their gummy smile surgery be reversed. The reason? All of her patients have been absolutely pleased and satisfied with the results!

# ARE THERE RISKS TO THE PROCEDURE?

---

As with any surgery or procedure, patients want to know what the risks are for a procedure. Gummy smiles surgery is no exception, however, instead of a huge list of side-effects and complications, the risk level can be completed in one word-- 'none.'

With all of the precautions during the diagnosis phase of gummy smile surgery, Dr. Gloria Ospina ensures that your risk level remains low. Because every action is charted before hand, you can rest assured that your medical complications remain at a minimum. That is something that you usually do not get to hear pre-surgery!

It might seem too good to be true, but because Dr. Ospina emphasizes the importance of proper planning and diagnosis, you can leave your gummy smile in the best of hands and experience a worry-free surgery!

# WHAT ABOUT DR. OSPINA'S GUMMY SMILE SURGERY SUCCESS RATE!

---

As you might have guessed from reading this e-Book, Dr. Gloria Ospina has a success rate that is unparalleled. By taking the time to create a proper diagnosis, using Botox to help with the success of the stitches, and using only the latest and best techniques, Dr. Ospina has created a procedure that only delivers great results.

# GUMMY SMILE BEFORE AND AFTER

---

BEFORE

AFTER

---

*Alex is a young man in his early twenties and wanted to reduce the amount of gum he showed when he smiles. Upon evaluating his case in our Coral Gables, Miami office, Dr. Ospina recommended the following course of treatment for him. First, Alex had an in office chair-side Zoom Two whitening procedure performed. Then the Gummy Smile Reduction Surgery was performed one week later. Lastly, he had light gum contouring performed to increase the amount of tooth shown when he smiles, while evening out the tooth gum line. Notice how the slanted appearance of his smile has been reduced with the combination of both procedures. Two weeks after his crown lengthening Dr. Ospina performed lip reposition to bring the lip down.*

AFTER

---

*A 30 year old lady came to our Coral Gables Fl office looking for improvement of her smile. Her main complaint was showing too much gum and her gum too thick. Dr Gloria Ospina carefully examined her smile and decided to increase the length of her teeth and do some bone reduction to eliminate the bumps around the ridge. Patient was able to see results immediately. Now she is ready to start orthodontic treatment with Invisalign.*
