

Retinal images are an essential part of your annual comprehensive eye exam.

Optomap[®]: When reviewed, the scan becomes a permanent part of your medical record, enabling the doctor to make an important comparison should potential vision threatening conditions show themselves at a future examination. Retinal problems such as **macular degeneration, glaucoma, retinal holes, retinal detachments, diabetic retinopathy and many systemic diseases** can now be seen without dilation* for most patients.

The doctors at Superior Vision highly recommend Optomap imaging for all patients on an annual basis. Optomap imaging allows the doctor to compare ocular health changes and early detection of many ocular diseases.

Please check ONE of the following:

_____ I understand and **accept the Optomap retinal imaging (\$35 copay). THIS IS DUE AT TIME OF SERVICE.** In MOST cases, dilation is not necessary if retinal imaging is performed.

OR

_____ I prefer Dilation today (no copay): Please allot an additional 20 minutes for your examination to allow the **eyedrops** to become effective. Side effects of dilation include light sensitivity and blurry vision.
