Medallion Instructions

- 
1. Mark ceiling for medallion position.
- 
2. Mark position of 2 screws for screwing medallion into place.
- 
3. If you want the medallion to encircle the chandelier pan or light fixture, lay the medallion on a flat surface & trace around the pan.
- 
4. For installation around the ceiling pan, cut hole with saber saw, hand saw or serrated knife.
- 
5. Paint medallion if desired.
- 
6. Apply adhesive to underside of medallion within 1/4 inch of the edge.
- 
7. Press medallion into place.
- 
8. Drive 2 screws through medallion & into ceiling joists. (If you want to leave screws in place, countersink them.) Let adhesive dry. Remove screws if desired & caulk holes.
- 
9. Run a bead of caulking around the perimeter.

Medallion Instructions

How to select a medallion size:

Follow these basic guidelines when trying to select the appropriate size medallion. A medallion should not overpower or underwhelm a room. These suggestions may help you create the right balance that you are looking for but ultimately the decision is yours!

Room Size = 140 square feet or less:
Medallion Diameter = Up to 20 inches

Room Size = 140 to 210 square feet:
Medallion Diameter = 20 to 30 inches

Room Size = 210 to 280 square feet:
Medallion Diameter = 30 to 40 inches

Room Size = More than 280 square feet:
Medallion Diameter = 40 inches or larger

Made of virtually indestructible high-density urethane our medallions are cast from steel molds making them the highest quality on the market. Steel molds provide a higher quality result for pattern consistency, design clarity & overall strength & durability. Lightweight they are easily installed with no special skills. Unlike plaster or wood urethane is resistant to cracking, warping or peeling. Factory-primed these medallions are ready for finishing.
