2013 EXPLORATION COMPLETES ON LEOTA PROJECT

Goldbank Mining Corporation (**TSX.V-GLB**) announces that it has completed its 2013 exploration program on the Leota Gold Project situated in the historical Klondike Goldfields in the Yukon Territory, Canada. Exploration included trenching and soil and outcrop sampling in selected portions of the Property.

Trenching program objectives were to expose bedrock, collect samples and record petrological, mineralogical and structural information to improve knowledge about gold mineralization and to identify new exploration targets. Soil sampling was designed to test the weathered residues of precious and base metals mineralization in areas adjacent to historical placer mining.

The trenching program was conducted using a rubber-tracked back-hoe. A total of 80 pits and trenches were excavated, logged and sampled. Soil sampling within a 400 by 300 meter grid was completed using a Dutch auger. Additional rock sampling and data logging was conducted on outcrops located within and outside the trenching and/or soil sampling grid.

The technical content of this news release was reviewed and approved by Dr. Bohumil (Boris) Molak, PhD., P.Geo (BC), a qualified person under National Instrument 43-101. Dr. Molak was in charge of the exploration program.

Goldbank Mining Corp. is a Canadian exploration company actively exploring the precious and base metal potential on the Leota Project situated within the historical Klondike Goldfields, near Dawson City in the Yukon Territory, Canada.
