and allow self service

MOBILE
critical apps and become
a digital enterprise

FUTURE-PROOF PLATFORM

Your IT team can securely manage the growing number of mobile devices while creating a foundation for the delivery of mobile business apps and infrastructure.

- Provides one trusted platform to manage devices, apps, and content for the entire organization
- Works with every device, every OS, and with any deployment type (BYO, Single, and Multi-user)
- Protects sensitive data at the user, application, device, and network levels

PROVIDE DIGITAL WORKSPACES

Your end users get single identity access to corporate resources, applications, and content, with the ability to self-service.

- Gives end users one-touch access to any application through a unified app catalogue
- Allows end users to manage their devices, apps, and content in a self-service portal
- Integrates easily with existing infrastructure, extending those systems to mobile devices

PROCESS AUTOMATION AND INNOVATION

AirWatch provides a powerful automation engine that eases the strain on your IT team and allows for business process innovation.

- Establish a mobile-first business model, and spark line of business innovation
- Realize time and cost savings by replacing traditional process with mobile processes
- Provides IT with powerful automation engines to easily scale device management

PROVIDE SECURE BYOD

With AirWatch, you can provide secure access to all your critical data and applications on any device that end users choose.

- Enable end users to work securely on the device that makes them most productive
- Allows work and personal data to co-exist safely on the same device
- Ensures tight integration so users can complete entire workflows on mobile devices
