

INCREASE REVENUE AND DRIVE CHANGE WITH NEXTGEN® POPULATION HEALTH SOLUTIONS

Valuable data-driven insights you can put into action

Use data-based insights to drive higher-quality care, control costs, and grow your practice.

is the amount wasted annually on unnecessary medical tests and treatments¹

of reimbursements being paid out by the largest health insurers are via value-based care models²

is at the core of driving quality improvement in healthcare³

Empowering caregivers with meaningful, data-driven insights

Practices today must manage large volumes of data, often from disparate sources. But data by itself does not help your practice improve patient outcomes or optimize financial performance. To improve clinical outcomes, deliver high-quality care, and manage your bottom line, your practice must utilize, analyze, and share data.

NextGen Population Health Solutions transform your data into insights your practice can put into action. Physicians and staff collaborate more effectively, identify lost revenue, and manage care with greater success when supported by a solid foundation of structured data. Expect quality of care, patient outcomes, and cost control to improve when data analytics drive your practice strategy.

Better results under value-based payment

A modular, cloud-based solution, NextGen Population Health Solutions draw on clinical, financial, claims, and patient-derived data. It then aggregates this data into a unified, coherent source of useful information. It gives you the big picture—a view into your entire patient population—as well as the status and trends of individual patients.

Gaining a view into your patient population is essential for transitioning from volume-based to value-based reimbursement. An accurate understanding of your population helps determine which patients have the greatest need for outreach and intervention and how best to allocate resources.

Identifying and stratifying patients at and near risk within your population is key to managing care, controlling costs, and improving patient outcomes. A data-based clinical strategy leads to increased revenue and better opportunities for growth under value-based payment models.

Costs go down, ROI goes up

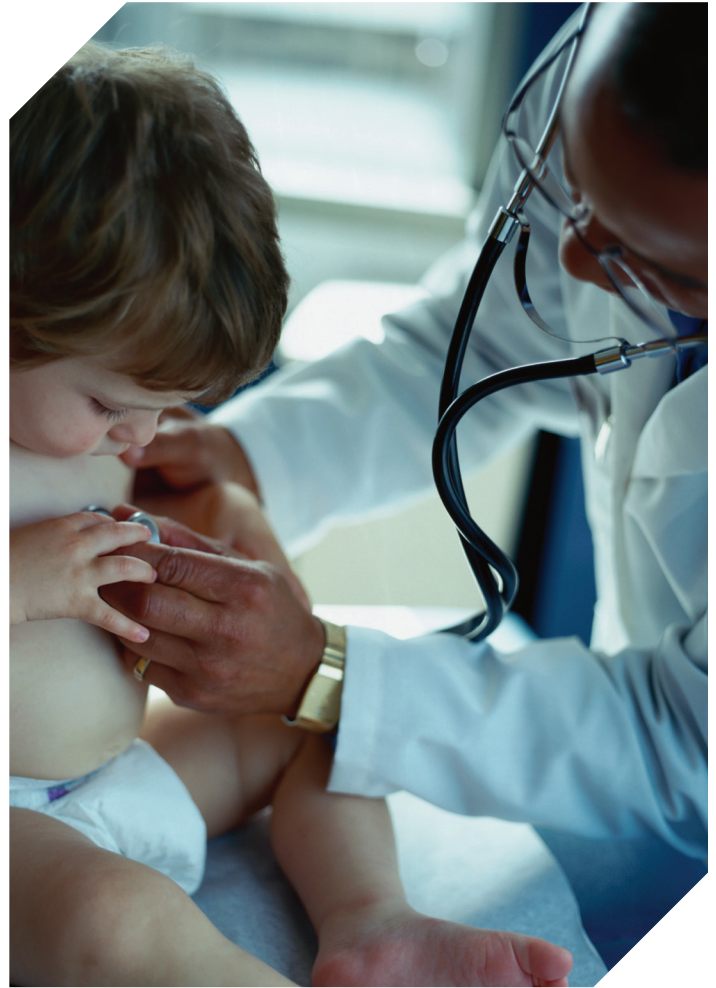

Data-driven and tailored to the unique needs of your practice, NextGen Population Health Solutions are simple and easy to use, with an industry-leading user experience. Use them to:

- Uncover gaps in care, and better classify, monitor, and follow up with your patients.
- Identify and eliminate low-value care—and divert dollars saved to essential healthcare services.
- Lower costs of care for the chronically ill, and prevent chronic disease in rising-risk and high-risk patients.
- Achieve National Committee for Quality Assurance (NCQA) Patient-Centered Medical Home (PCMH) recognition.

Outreach campaigns are critical to effectively managing care in value-based reimbursement. NextGen Population Health Solutions make patient outreach easier and more efficient by enabling you to quickly identify at-risk patients and notify them of steps they can take to improve their health. For a proactive approach, you can automate patient reminders.

“We’ve only been using the platform for a few months, but we’ve already seen an impact on patient care and patient engagement. The system has already paid for itself.”

Dr. Nicholas Coté, chief medical informatics officer
