

# Zimperium for VMware Airwatch

Enabling complete end-to-end mobile threat protection

**Together enact risk-based policy to prevent a single mobile device from compromising the enterprise**

## Complete Mobile Security

VMware® AirWatch® and Zimperium have partnered to provide a complete enterprise mobile security solution that delivers sophisticated threat protection for mobile devices against known and unknown threats to ensure corporate data and networks are not compromised by a mobile attack.

Together, AirWatch and Zimperium enable enterprises to manage and secure mobile devices against the broadest array of network, device and application mobile attacks. Zimperium continuously detects and analyses threats and provides AirWatch with the visibility to enact risk-based policies to protect mobile devices from compromising the corporate network and its assets

The integrated solution provides IT Security Administrators with a way to safely enable BYOD and strike the balance between empowering mobile employees to be more productive with the device of their choice, while at the same time securing mobile devices and the enterprise against advanced threats.

## Key Benefits

Built from the ground up for mobile devices, Zimperium's Mobile Threat Protection uses machine learning technology optimized to run on the device without an Internet connection. Its non-intrusive approach to securing the device provides protection around the clock without impacting the user experience or violating user privacy. Built on a scalable architecture and seamlessly integrated with AirWatch, it supports the demands of any large enterprise.

## How Zimperium Integrates with AirWatch:

- Ease of Deployment and Upgrades:** AirWatch provides an easy-to-use policy management solution to deploy and upgrade the Zimperium zIPS – Mobile Threat Protection app to a large number of employees' devices via their internal app delivery capabilities.
- Protect your Corporate Infrastructure:** When Zimperium detects that a device has been compromised, AirWatch can enact risk-based compliance policies to remediate depending on the severity of the threat. The policies can temporarily disable the mobile device's connections to corporate services (email or other apps, Wi-Fi and VPN) or even remove enterprise applications from the device. These actions stop the spread of the infection and prevent risk to corporate data.
- Alerting & Reporting:** Zimperium provides comprehensive mobile threat forensics along with configurable end-user notifications and administrator alerts by attack type to suit the needs of any enterprise. Privacy data collection policies are also provided to meet regional regulations as well.
- Enforcement:** AirWatch device management capabilities ensure the Zimperium zIPS – Mobile Threat Protection app is not disabled or removed by users to ensure cyberattack protection is always enabled.

FEATURES & BENEFITS	AirWatch	ZIMPERIUM
Detect if device has proper physical security enabled (pin code, device-level encryption)	✓	
Detect if device is jailbroken/rooted	✓	✓
Access controls to corporate email, VPN and Wi-Fi	✓	
Corporate app delivery and removal	✓	
Secure corporate document sharing	✓	
Secure Web browser	✓	
Secure line-of-business apps	✓	
Revoke access to non-compliant mobile devices	✓	
Support for iOS and Android devices	✓	✓
Provide vulnerability risk posture for OS/device, network and app risks		✓
Detect network attacks (Man-in-the-Middle, rogue Wi-Fi and Cellular networks)		✓
Detect SSL stripping, attempts to intercept SSL traffic		✓
Detect attackers conducting reconnaissance scans		✓
Detect OS/Kernel and USB exploitations, profile/configuration changes, system tampering		✓
Detect malicious apps, known and unknown malware, dynamic threats using download & execute		✓
Detect zero-day attacks and any attack using Elevation of Privileges		✓
Provide detailed mobile threat forensic reports		✓
Enforce Zimperium app to be always enabled	✓	
Enforce risk-based policy including lock or selective wipe for compromised devices	✓	

Zimperium is a leading enterprise mobile threat protection provider. Only the Zimperium platform delivers continuous and real-time threat protection to both devices and applications. Through its disruptive, on-device detection engine that uses patented, machine learning algorithms, Zimperium generates “self-protecting” apps and protects against the broadest array of mobile attacks.
