Introducing Invisalign® Lite

The new 14-stage treatment option with the versatility you need to treat mild to moderate cases.
An Invisalign treatment option for every patient.

You asked. We listened.

Practices like yours have been looking for an Invisalign treatment option designed specifically for mild to moderate cases.

With the new 14-stage Invisalign Lite treatment option, you can offer your patient the right treatment for their smile at a price that makes sense for them and for your practice.
Practice growth opportunity

Patients in your practice today – and prospective patients – may be good candidates for Invisalign Lite treatment.

75% of patients could benefit from a smile improvement.¹

49% of prospective patients present with Class I occlusion² may be candidates for mild to moderate orthodontic treatment.

Market leading innovations

The new Invisalign Lite treatment features the same technological innovations that have made Invisalign clear aligners the trusted choice for orthodontic treatment across the clinical spectrum, including mild, moderate, and complex cases.

The unparalleled expertise that comes from having treated more than 4 million Invisalign patients means greater accuracy, reliability, and predictability for each of your patients.³

“Invisalign Lite treatment enables me to achieve more full arch tooth movement than the Invisalign Express 10 product at a price point that’s attractive for mild to moderate cases.”

– Payam Ataii, DMD, MBA
Invisalign Lite has all the advantages you trust

- **SmartForce® features** are customized to each tooth to achieve more predictable tooth movements.
- Aligners made from SmartTrack® material provide patients with a better fit and better comfort, and are easier to insert and remove.
- **Powerful and sophisticated ClinCheck® software** supports treatment planning and monitoring.
- **Weekly aligner changes** may provide up to 50% shorter treatment time, compared to two-week aligner wear.

Invisalign Lite is ideal for

- Mild to moderate crowding or spacing
- Restorative treatment, such as tooth movement prior to veneers
- Patients who desire improved facial and smile aesthetics
- Partial tooth movement before implant placement
- Multidisciplinary treatment or comprehensive smile design

Discover more at www.invisalign.com/lite or talk to your Invisalign representative today.

For $1,199 Invisalign Lite includes:

- 14 stages of tooth movement across all teeth, with no clinical limitations
- Treatment designed for mild to moderate malocclusion
- One refinement included in treatment price
- Option for dual- or single-arch treatment

**•** Powerful and sophisticated ClinCheck® software supports treatment planning and monitoring.

**•** Weekly aligner changes may provide up to 50% shorter treatment time, compared to two-week aligner wear.
Every smile was made to move.

With Invisalign Lite treatment, you can convert more cost-sensitive patients.

Patient’s chief concern: Improve aesthetics of smile

Doctor’s treatment objective and results:

Patient presented in functional Class II (Div 1) occlusion with peg laterals, deep bite, and an interincisal diastema. Using Invisalign clear aligners, doctor’s goals for this Ortho/Restorative Combo Case were to maintain Class II relationship, align and coordinate arches, and close diastema.

At the end of orthodontic treatment, a small amount of space — both mesial and distal of upper laterals — were left to accommodate two composite veneers of same width to complete the restoration and deliver a beautiful smile.

Patient is in retention with a fixed retainer on lower arch and a retainer on upper arch. Doctor completed this restorative treatment in less than 6 months and exceeded the patient’s expectations.

Initial | Pre-Restorative | Final

Weekly aligner changes are recommended for all Invisalign treatments (with default staging protocol) for Invisalign Full, Invisalign Teen, Invisalign Assist, and Invisalign Lite products. The decision to prescribe weekly aligner changes is at the doctor’s discretion. Monitor tooth movements such as rotations, extrusions, and significant root movements; particularly blue and black movements in the Tooth Movement Assessment (TMA). Depending on the patient response to treatment, particularly mature adults, consider longer periods between aligner changes.
