

Installation Guide

Vertical Mounting:

1) Measure your wall space and confirm location of wall studs. Most household wall studs are built 16" apart (on-center). We recommend using a stud-finder tool or strong magnet to assist locating your studs.

2) If mounting one single vertical rack, use a level to ensure the rack is positioned perfectly vertical on your wall.

If mounting two vertical racks, double-check the length of your gear to ensure each side properly supports your gear for balance. In most cases, this means your racks will be spaced 16", 32", or 48" apart depending on the length of your gear you wish to load.

Example: If you plan to hang your skis, make sure each side of the rack supports the skis towards the tips so each pair is properly balanced.

3) Once you have confirm the correct placement of your racks, use the provided hardware (screws) to securely fasten the racks to your wall. These screws require a phillips head screw driver or drill bit to install into your wall studs.

4) Have fun showing off your organized gear!

Horizontal Mounting:

1) Measure your wall space and confirm location of wall studs. Most household wall studs are built 16" apart (on-center). We recommend using a stud-finder tool or strong magnet to assist locating your studs.

2) The rack's mounting holes intentionally located 32" apart so you can mount the rack securely into 2 wall studs.

3) Use the provided hardware (x2 screws) to securely fasten the rack to your wall.

4) Have fun showing off your organized gear!
