Preface ix

Introduction 1
Why History Is Impossible, Yet Necessary All the Same

1 It Would Be Logical to Assume . . . 9
Can we really know about the past? Maybe we can. All about facts, deduction, inference, and reasoning.

2 What’s Wrong with This Argument? 33
Historians use facts to make arguments. Sometimes those arguments are wrongheaded. But historians can learn to do better.

3 Historians and the Loaded Question 52
Historians are not above asking the loaded question and its benign cousins, the hypothetical and the rhetorical questions, are a useful part of historical analysis and teaching.

4 Cause for Alarm 65
Historical causation in words and with numbers is a vital part of our scholarship, and any philosophy of history.

5 One of Us Is Lying 87
And why not? Historians lie, and some entire histories are lies for hire or profit. But lying is a part of history too that can be turned to good use.

6 The Politics of History and History in Politics 106
Historians have their own politics, and politicians use history all the time. Strange bedfellows, and a lesson for both.

7 Historians in the Marketplace 128
Historians are not just scholars or teachers. They are pitchmen and popularizers. What does that mean for a philosophy of history? Let’s ask game theory.
8 Uncertainties
Are historians’ words also things? Can historians find patterns in the chaos of the evidence? Can there be a true history, or will history always be relative to the time and place of its students?

9 Historians Confront the Problem of Evil
The oldest and most vexing of historical dilemmas, and the one that historians alone may be able to solve.

Conclusion
A Bridge to the Past

Glossary
All the terminology introduced in the text, explained one more time.

A Very Brief Bibliographical Essay
