What ports are needed for Autodesk to successfully handle network license requests?

Updated: 5/19/2016

There are 2 ports that Autodesk uses.

1. TCP incoming 2080
2. TCP incoming 27000

PLTW suggests you name these Autodesk in your firewall rules to allow easy auditing for IT departments:
1. Name 2080 port “autodesk_adskflex”
2. Name 27000 port “autodesk_lmgrd”
