Folder Permissions for PLTW Software

Updated: 5/13/2016

Issue

To successfully run software user permissions must be granted to the software folders in the Program Files and ProgramData and Public Documents location.

If you are unsure on the process of granting user / group permissions you should contact your IT staff ASAP.

Resolution

Follow steps below depending on software.

Autodesk

1. Select the folder of your choice in the C:\Program Files location.
2. Give users full controller over the folder.
3. For Inventor Professional, there can be a problem after installation with the location of the Undo folder if the installer did not copy the profile to the default location.
   a. To resolve: Create a folder named Temp on the C:\ drive. This can be used by other programs if needed.

   b. Start Inventor.
   c. From Tools select Options.
   d. In Application Option dialog box select Files tab.
   e. Use the Browse button to relocate to the Undo folder you just created.

© Project Lead The Way
Multisim

1. Grant users full control over the Circuit Design Suite files in the National Instruments Folder.

Intelitek Software (Robocell, CNCMotion, etc.)

1. Grant users full control.

![Intelitek Permissions](image2.png)
2. To allow any of the Intelitek software to function you will need to give permission to the shortcut to the software in the Start menu folder. Right click on the shortcut and give the users full control over the shortcut.

MDSolids

1. Grant users full control.
